

Atg4b Polyclonal Antibody

Catalog No :	YT0394
Reactivity :	Human;Mouse
Applications :	WB;IHC;IF;ELISA
Target :	ATG4b
Fields :	>>Autophagy - other;>>Autophagy - animal
Gene Name :	ATG4B
Protein Name :	Cysteine protease ATG4B
Human Gene Id :	23192
Human Swiss Prot No :	Q9Y4P1
Mouse Gene Id :	66615
Mouse Swiss Prot No :	Q8BGE6
Immunogen :	The antiserum was produced against synthesized peptide derived from human ATG4B. AA range:71-120
Specificity :	Atg4b Polyclonal Antibody detects endogenous levels of Atg4b protein.
Formulation :	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
Source :	Polyclonal, Rabbit,IgG
Dilution :	WB 1:500 - 1:2000. IHC 1:100 - 1:300. ELISA: 1:20000.. IF 1:50-200
Purification :	The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.
Concentration :	1 mg/ml

Storage Stability : -15°C to -25°C/1 year(Do not lower than -25°C)

Observed Band : 44kD

Cell Pathway : Regulation of autophagy;

Background : Autophagy is the process by which endogenous proteins and damaged organelles are destroyed intracellularly. Autophagy is postulated to be essential for cell homeostasis and cell remodeling during differentiation, metamorphosis, non-apoptotic cell death, and aging. Reduced levels of autophagy have been described in some malignant tumors, and a role for autophagy in controlling the unregulated cell growth linked to cancer has been proposed. This gene encodes a member of the autophagin protein family. The encoded protein is also designated as a member of the C-54 family of cysteine proteases. Alternate transcriptional splice variants, encoding different isoforms, have been characterized. [provided by RefSeq, Jul 2008],

Function : enzyme regulation:Inhibited by N-ethylmaleimide.,function:Cysteine protease required for autophagy, which cleaves the C-terminal part of either MAP1LC3, GABARAPL2 or GABARAP, allowing the liberation of form I. A subpopulation of form I is subsequently converted to a smaller form (form II). Form II, with a revealed C-terminal glycine, is considered to be the phosphatidylethanolamine (PE)-conjugated form, and has the capacity for the binding to autophagosomes.,similarity:Belongs to the peptidase C54 family.,tissue specificity:Mainly expressed in the skeletal muscle, followed by brain, heart, liver and pancreas.,

Subcellular Location : Cytoplasm . Cytoplasm, cytosol . Cytoplasmic vesicle, autophagosome . Endoplasmic reticulum . Mitochondrion . Mainly localizes to the cytoplasm, including cytosol (PubMed:29165041). A small portion localizes to mitochondria; phosphorylation at Ser-34 promotes localization to mitochondria (PubMed:29165041). .

Expression : Brain,Embryo,Endometrium,Epithelium,Hippocampus,Liver,Placenta,Test

Tag : orthogonal

Sort : 697

No4 : 1

Host : Rabbit

Modifications : Unmodified
