

ADAMTS-17 Polyclonal Antibody

YT0115 Catalog No:

Reactivity: Human; Mouse

IHC;IF;ELISA **Applications:**

Target: ADAMTS-17

Gene Name: ADAMTS17

Protein Name: A disintegrin and metalloproteinase with thrombospondin motifs 17

Human Gene Id: 170691

Human Swiss Prot

No:

Q8TE56

Synthesized peptide derived from ADAMTS-17. at AA range: 150-230 Immunogen:

Specificity: ADAMTS-17 Polyclonal Antibody detects endogenous levels of ADAMTS-17

protein.

Formulation: Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

Dilution: IHC 1:100 - 1:300. ELISA: 1:20000.. IF 1:50-200

The antibody was affinity-purified from rabbit antiserum by affinity-**Purification:**

chromatography using epitope-specific immunogen.

Concentration: 1 mg/ml

-15°C to -25°C/1 year(Do not lower than -25°C) **Storage Stability:**

Molecularweight: 121kD

This gene encodes a member of the ADAMTS (a disintegrin and **Background:**

metalloproteinase with thrombospondin motifs) protein family. ADAMTS family

members share several distinct protein modules, including a propeptide region, a metalloproteinase domain, a disintegrin-like domain, and a thrombospondin type 1 (TS) motif. Individual members of this family differ in the number of C-terminal TS motifs, and some have unique C-terminal domains. The encoded preproprotein is proteolytically processed to generate the mature protein, which may promote breast cancer cell growth and survival. Mutations in this gene are associated with a Weill-Marchesani-like syndrome, which is characterized by lenticular myopia, ectopia lentis, glaucoma, spherophakia, and short stature. [provided by RefSeq, May 2016],

Function:

domain:The conserved cysteine present in the cysteine-switch motif binds the catalytic zinc ion, thus inhibiting the enzyme. The dissociation of the cysteine from the zinc ion upon the activation-peptide release activates the enzyme.,PTM:The precursor is cleaved by a furin endopeptidase.,similarity:Contains 1 disintegrin domain.,similarity:Contains 1 peptidase M12B domain.,similarity:Contains 1 PLAC domain.,similarity:Contains 5 TSP type-1 domains.,tissue specificity:Expressed in fetal lung, in adult brain, prostate, and liver.,

Subcellular Location:

Secreted, extracellular space, extracellular matrix.

Expression:

Isoform 1 and isoform 2 are expressed at high levels in the lung, brain, whole eye and retina. Isoform 1 shows a weaker expression in the heart, kidney and skeletal muscle. Isoform 2 shows a weaker expression in the kidney, bone marrow and skeletal muscle. Isoform 1 and isoform 2 are expressed at high levels in the fetal heart, kidney, and whole eye, whereas a weak expression is seen in the fetal liver.

Sort: 1732

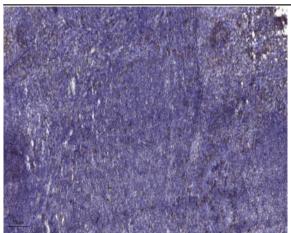

No4:

Host: Rabbit

Modifications: Unmodified
