

## **BMP-7 Polyclonal Antibody**

Catalog No: YT0503

**Reactivity:** Human; Mouse; Rat

**Applications:** WB;IHC;IF;ELISA

Target: BMP-7

**Fields:** >>Cytokine-cytokine receptor interaction;>>TGF-beta signaling

pathway;>>Axon guidance;>>Hippo signaling pathway

Gene Name: BMP7

**Protein Name:** Bone morphogenetic protein 7

P18075

P23359

Human Gene Id: 655

**Human Swiss Prot** 

No:

Mouse Gene Id: 12162

**Mouse Swiss Prot** 

No:

**Immunogen:** The antiserum was produced against synthesized peptide derived from human

BMP-7. AA range:124-173

**Specificity:** BMP-7 Polyclonal Antibody detects endogenous levels of BMP-7 protein.

**Formulation :** Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

**Dilution :** WB 1:500 - 1:2000. IHC 1:100 - 1:300. ELISA: 1:40000.. IF 1:50-200

**Purification:** The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

Concentration: 1 mg/ml

1/4

-15°C to -25°C/1 year(Do not lower than -25°C) **Storage Stability:** 

**Observed Band:** 55kD

Cytokine-cytokine receptor interaction; Hedgehog; TGF-beta; **Cell Pathway:** 

**Background:** This gene encodes a secreted ligand of the TGF-beta (transforming growth

factor-beta) superfamily of proteins. Ligands of this family bind various TGF-beta

receptors leading to recruitment and activation of SMAD family transcription factors that regulate gene expression. The encoded preproprotein is

proteolytically processed to generate each subunit of the disulfide-linked homodimer, which plays a role in bone, kidney and brown adipose tissue

development. Additionally, this protein induces ectopic bone formation and may

promote fracture healing in human patients. [provided by RefSeq, Jul 2016],

**Function:** function:Induces cartilage and bone formation. May be the osteoinductive factor

> responsible for the phenomenon of epithelial osteogenesis. Plays a role in calcium regulation and bone homeostasis., online information: Bone morphogenetic protein 7 entry, pharmaceutical: Available under the names Osigraft (Stryker). Its use is

indicated in the treatment of tibial non-union of at least 9 month duration.

secondary to trauma, in skeletally mature patients, in cases where autograft has failed or is unfeasible., PTM: Several N-termini starting at positions 293, 300, 315 and 316 have been identified by direct sequencing resulting in secretion of

different mature forms (PubMed:17977014)., similarity: Belongs to the TGF-beta family., subunit: Homodimer; disulfide-linked. Interacts with SOSTDC1. Interacts

with TWSG1., tissue specificity: Expressed in the kidneys and bladder. Lower levels seen in the brain...

Subcellular

Location:

Secreted.

**Expression:** Expressed in the kidney and bladder. Lower levels seen in the brain.

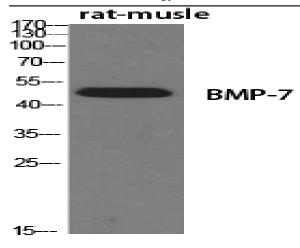

Sort: 2804

No4:

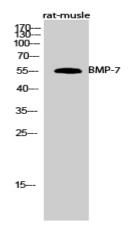

Host: Rabbit

**Modifications:** Unmodified
