

## COX10 Polyclonal Antibody

<b>Catalog No :</b>	YT1068
<b>Reactivity :</b>	Human;Rat;Mouse;
<b>Applications :</b>	WB;ELISA
<b>Target :</b>	COX10
<b>Fields :</b>	>>Oxidative phosphorylation;>>Porphyrin metabolism;>>Metabolic pathways;>>Biosynthesis of cofactors;>>Thermogenesis
<b>Gene Name :</b>	COX10
<b>Protein Name :</b>	Protoheme IX farnesyltransferase mitochondrial
<b>Human Gene Id :</b>	1352
<b>Human Swiss Prot No :</b>	Q12887
<b>Mouse Swiss Prot No :</b>	Q8CFY5
<b>Immunogen :</b>	The antiserum was produced against synthesized peptide derived from human COX10. AA range:98-147
<b>Specificity :</b>	COX10 Polyclonal Antibody detects endogenous levels of COX10 protein.
<b>Formulation :</b>	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
<b>Source :</b>	Polyclonal, Rabbit,IgG
<b>Dilution :</b>	WB 1:500 - 1:2000. ELISA: 1:10000. Not yet tested in other applications.
<b>Purification :</b>	The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.
<b>Concentration :</b>	1 mg/ml
<b>Storage Stability :</b>	-15°C to -25°C/1 year(Do not lower than -25°C)

---

<b>Observed Band :</b>	49kD
<b>Cell Pathway :</b>	Oxidative phosphorylation;Porphyrin and chlorophyll metabolism;
<b>Background :</b>	<p>Cytochrome c oxidase (COX), the terminal component of the mitochondrial respiratory chain, catalyzes the electron transfer from reduced cytochrome c to oxygen. This component is a heteromeric complex consisting of 3 catalytic subunits encoded by mitochondrial genes and multiple structural subunits encoded by nuclear genes. The mitochondrially-encoded subunits function in electron transfer, and the nuclear-encoded subunits may function in the regulation and assembly of the complex. This nuclear gene encodes heme A:farnesyltransferase, which is not a structural subunit but required for the expression of functional COX and functions in the maturation of the heme A prosthetic group of COX. This protein is predicted to contain 7-9 transmembrane domains localized in the mitochondrial inner membrane. A gene mutation, which results in the substitution of a lys</p>
<b>Function :</b>	<p>disease:Defects in COX10 are a cause of cytochrome c oxidase deficiency (COX deficiency) [MIM:220110]. COX deficiency is a clinically heterogeneous disorder. The clinical features are ranging from isolated myopathy to severe multisystem disease, with onset from infancy to adulthood.,disease:Defects in COX10 are a cause of Leigh syndrome (LS) [MIM:256000]. LS is a severe neurological disorder characterized by bilaterally symmetrical necrotic lesions in subcortical brain regions.,function:Converts protoheme IX and farnesyl diphosphate to heme O.,similarity:Belongs to the ubiA prenyltransferase family.,</p>
<b>Subcellular Location :</b>	Mitochondrion membrane; Multi-pass membrane protein.
<b>Expression :</b>	Brain,
<b>Tag :</b>	hot
<b>Sort :</b>	4469
<b>No4 :</b>	1
<b>Host :</b>	Rabbit
<b>Modifications :</b>	Unmodified

---
