

## **CKR-5 Polyclonal Antibody**

Catalog No: YT0936

Reactivity: Human; Mouse; Rat

**Applications:** IHC;IF;ELISA

Target: CKR-5

**Fields:** >>Viral life cycle - HIV-1;>>Cytokine-cytokine receptor interaction;>>Viral

protein interaction with cytokine and cytokine receptor;>>Chemokine signaling

pathway;>>Endocytosis;>>Toxoplasmosis;>>Human cytomegalovirus infection;>>Kaposi sarcoma-associated herpesvirus infection;>>Human

immunodeficiency virus 1 infection;>>Viral carcinogenesis

Gene Name: CCR5

**Protein Name:** C-C chemokine receptor type 5

P51681

P51682

Human Gene ld: 1234

**Human Swiss Prot** 

No:

Mouse Gene Id: 12774

**Mouse Swiss Prot** 

No:

**Rat Gene Id:** 117029

Rat Swiss Prot No: 008556

**Immunogen:** The antiserum was produced against synthesized peptide derived from human

CCR5. AA range:292-341

**Specificity:** CKR-5 Polyclonal Antibody detects endogenous levels of CKR-5 protein.

**Formulation :** Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

**Source :** Polyclonal, Rabbit, IgG

**Dilution :** IHC 1:100 - 1:300. ELISA: 1:5000.. IF 1:50-200

**Purification:** The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

Concentration: 1 mg/ml

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Observed Band: 41kD

**Cell Pathway:** Cytokine-cytokine receptor interaction; Chemokine; Endocytosis;

**Background:** This gene encodes a member of the beta chemokine receptor family, which is

predicted to be a seven transmembrane protein similar to G protein-coupled receptors. This protein is expressed by T cells and macrophages, and is known to be an important co-receptor for macrophage-tropic virus, including HIV, to enter host cells. Defective alleles of this gene have been associated with the HIV

infection resistance. The ligands of this receptor include monocyte

chemoattractant protein 2 (MCP-2), macrophage inflammatory protein 1 alpha (MIP-1 alpha), macrophage inflammatory protein 1 beta (MIP-1 beta) and regulated on activation normal T expressed and secreted protein (RANTES). Expression of this gene was also detected in a promyeloblastic cell line,

suggesting that this protein may play a role in granulocyte lineage proliferation

and differentiation. This gene is located at the chemok

**Function:** disease:Genetic variation in CCR5 is associated with suseptibility to insulin-

dependent diabetes mellitus type 22 (IDDM22) [MIM:612522]. IDDM is caused by the body's own immune system which destroys the insulin-producing beta cells in the pancreas. Classical features are polydipsia, polyphagia and polyuria, due to hyperglycemia-induced osmotic diuresis.,function:Receptor for a number of inflammatory CC-chemokines including MIP-1-alpha, MIP-1-beta and RANTES and subsequently transduces a signal by increasing the intracellular calcium ion level. May play a role in the control of granulocytic lineage proliferation or differentiation. Acts as a coreceptor (CD4 being the primary receptor) for HIV-1 R5 isolates.,online information:CC chemokine receptors entry,online

information:CCR5 receptor entry,polymorphism:Ser-60 variant, a naturally

occurring mutation in a conserved residue in the first i

Subcellular Location:

Cell membrane; Multi-pass membrane protein.

**Expression:** Highly expressed in spleen, thymus, in the myeloid cell line THP-1, in the

promyeloblastic cell line KG-1a and on CD4+ and CD8+ T-cells. Medium levels in

peripheral blood leukocytes and in small intestine. Low levels in ovary and lung.

**Sort :** 4069

2/3

**No4**: 1

**Host:** Rabbit

Modifications: Unmodified
