

## Insulin Polyclonal Antibody

Catalog No :	YT2357
Reactivity :	Human;Mouse;Rat
Applications :	WB;IHC;IF;ELISA
Target :	Insulin
Fields :	>>MAPK signaling pathway;>>Ras signaling pathway;>>Rap1 signaling pathway;>>cGMP-PKG signaling pathway;>>HIF-1 signaling pathway;>>FoxO signaling pathway;>>Phospholipase D signaling pathway;>>Oocyte meiosis;>>Autophagy - animal;>>mTOR signaling pathway;>>PI3K-Akt signaling pathway;>>AMPK signaling pathway;>>Longevity regulating pathway;>>Longevity regulating pathway - multiple species;>>Regulation of actin cytoskeleton;>>Insulin signaling pathway;>>Insulin secretion;>>Ovarian steroidogenesis;>>Progesterone-mediated oocyte maturation;>>Prolactin signaling pathway;>>Regulation of lipolysis in adipocytes;>>Type II diabetes mellitus;>>Insulin resistance;>>Non-alcoholic fatty liver disease;>>Type I diabetes mellitus;>>Maturity onset diabetes of the young;>>Aldosterone- regulated sodium reabsorption;>>Alzheimer disease;>>Prostate cancer;>>Diabetic cardiomyopathy
Gene Name :	INS
Protein Name :	Insulin
Human Gene Id :	3630
Human Swiss Prot	P01308
No : Immunogen :	The antiserum was produced against synthesized peptide derived from human Insulin. AA range:49-98
Specificity :	Insulin Polyclonal Antibody detects endogenous levels of Insulin protein.
Formulation :	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
Source :	Polyclonal, Rabbit,IgG

Purification : The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.   Concentration : 1 mg/ml   Storage Stability : -15°C to -25°C/1 year(Do not lower than -25°C)   Molecularweight : 12kD   Cell Pathway : Oocyte meiosis;Regulation of autophagy;mTOR;Regulates Actin and Cytoskeleton;Insulin_Receptor;Progesterone-mediated oocyte maturation;Type II diabetes mellitus;Type I diabetes mellitus;Maturity onset   Background : After removal of the precursor signal peptide, proinsulin is post-translationally cleaved into three peptides: the B chain and A chain peptides, which are	Best Tools for immunolo	
chromatography using epitope-specific immunogen.   Concentration : 1 mg/ml   Storage Stability : -15°C to -25°C/1 year(Do not lower than -25°C)   Molecularweight : 12kD   Cell Pathway : Oocyte meiosis;Regulation of autophagy;mTOR;Regulates Actin and Cytoskeleton;Insulin_Receptor;Progesterone-mediated oocyte maturation;Type II diabetes mellitus;Type I diabetes mellitus;Maturity onset   Background : After removal of the precursor signal peptide, proinsulin is post-translationally cleaved into three peptides: the B chain and A chain peptides, which are covalently linked via two disulfide bonds to form insulin, and C-peptide. Binding of insulin to the insulin receptor (INSR) stimulates glucose uptake. A multitude of mutant alleles with phenotypic effects have been identified. There is a read-through gene, INS-IGF2, which overlaps with this gene at the 5' region and with the IGF2 gene at the 3' region. Alternative splicing results in multiple transcript variants. [provided by RefSeq. Jun 2010].   Function : disease:Defects in INS are the cause of familial hyperproinsulinemia [MIM:176730].function:Insulin decreases blood glucose concentration. It increases cell permetsial amplifier of glucose-mediated or-secretion with insulin, and acts as physiological amplifier of glucose-mediated insulin secretion. Exhibits osteogenic properties by increasing osteoblast mitogenic activity through phosphoactivation of MAPK1 and MAPK3.function:The insulin.Exhibits of teors posses growth-promoting activity. In vitro, they are potent mitogens for cultured cells. IGF-II is influenced by placental lactogen and may play a role in fetal development, mass spectrometry: PubMed:12586331; PubMed:15359740,online information:Cl	Dilution :	WB 1:500-2000 IHC 1:100 - 1:300. ELISA: 1:10000. IF 1:50-200
Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)   Molecularweight: 12kD   Cell Pathway: Oocyte meiosis;Regulation of autophagy;mTOR;Regulates Actin and Cytoskeleton;Insulin, Receptor;Progesterone-mediated oocyte maturation;Type II diabetes melitus;Type I diabetes melitus;Type II diabetes which are covalently linked via two disulfide bonds to form insulin, and C-petide. Binding of insulin to the insulin receptor (INSR) stimulates glucose uptake. A multitude of mutant alleles with phenotypic effects have been identified. There is a read-through gene, INS-IGF2, which overlaps with this gene at the 5' region and with the IGF2 gene at the 3' region. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Jun 2010].   Function: disease:Defects in INS are the cause of familial hyperproinsulinemia [MM:176730], function:Insulin decreases blood glucose concentration. It increases cell permeability to monsaccharides, amino acids and fatty acids. It accelerates glycolysis, the pentose phosphate cycle, and glycoge synthesis in liver, function.Preptin undergoes glucose-mediated costered insulin secretion with insulin, and acts as physiological amplifier of glucose-mediated coster in the isola through phosphate cycle, and glycoge and may play a role in fetal development, mass spectrometry. PubMed:1258631: PubMed:15359740,online information:Clinical information on Ell Lilly insu   Subcellular Secreted.   Location : Elood Liver, Muscle, Pancreas,   Tag : orthogonal	Purification :	
Molecularweight : 12kD   Cell Pathway : Oocyte meiosis;Regulation of autophagy;mTOR;Regulates Actin and Cytoskeleton;Insulin_Receptor;Progesterone-mediated oocyte maturation;Type II diabetes mellitus;Type I diabetes mellitus;Maturity onset   Background : After removal of the precursor signal peptide, proinsulin is post-translationally cleaved into three peptides: the B chain and A chain peptides, which are covalently linked via two disulfide bonds to form insulin, and C-peptide.
