

Laminin α -5 Polyclonal Antibody

Catalog No :	YT2527
Reactivity :	Human;Mouse
Applications :	WB;IHC;IF;ELISA
Target :	LAMA5
Fields :	>>PI3K-Akt signaling pathway;>>Focal adhesion;>>ECM-receptor interaction;>>Toxoplasmosis;>>Amoebiasis;>>Human papillomavirus infection;>>Pathways in cancer;>>Small cell lung cancer
Gene Name :	LAMA5
Protein Name :	Laminin subunit alpha-5
Human Gene Id :	3911
Human Swiss Prot No :	O15230
Mouse Gene Id :	16776
Mouse Swiss Prot No :	Q61001
Immunogen :	The antiserum was produced against synthesized peptide derived from human LAMA5. AA range:2381-2430
Specificity :	Laminin α -5 Polyclonal Antibody detects endogenous levels of Laminin α -5 protein.
Formulation :	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
Source :	Polyclonal, Rabbit,IgG
Dilution :	WB 1:500 - 1:2000. IHC: 1:100-300 ELISA: 1:20000. IF 1:100-300 Not yet tested in other applications.
Purification :	The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

Concentration : 1 mg/ml

Storage Stability : -15°C to -25°C/1 year(Do not lower than -25°C)

Observed Band : 400kD

Cell Pathway : Focal adhesion;ECM-receptor interaction;Pathways in cancer;Small cell lung cancer;

Background : This gene encodes one of the vertebrate laminin alpha chains. Laminins, a family of extracellular matrix glycoproteins, are the major noncollagenous constituent of basement membranes. They have been implicated in a wide variety of biological processes including cell adhesion, differentiation, migration, signaling, neurite outgrowth and metastasis. Laminins are composed of 3 non identical chains: laminin alpha, beta and gamma (formerly A, B1, and B2, respectively) and they form a cruciform structure consisting of 3 short arms, each formed by a different chain, and a long arm composed of all 3 chains. Each laminin chain is a multidomain protein encoded by a distinct gene. The protein encoded by this gene is the alpha-5 subunit of of laminin-10 (laminin-511), laminin-11 (laminin-521) and laminin-15 (laminin-523). [provided by RefSeq, Jun 2013],

Function : domain:Domain G is globular and is part of the major cell-binding site located in the long arm of the laminin heterotrimer.,function:Binding to cells via a high affinity receptor, laminin is thought to mediate the attachment, migration and organization of cells into tissues during embryonic development by interacting with other extracellular matrix components.,similarity:Contains 1 laminin IV type A domain.,similarity:Contains 1 laminin N-terminal domain.,similarity:Contains 22 laminin EGF-like domains.,similarity:Contains 5 laminin G-like domains.,subcellular location:Major component.,subunit:Laminin-15 complex is an heterotrimer composed of three chains (alpha-5/beta-2/gamma-3) which are bound to each other by disulfide bonds into a cross-shaped molecule comprising one long and three short arms with globules at each end.,tissue specificity:Expressed in heart, lung, kidney, skeletal mus

Subcellular Location : Secreted, extracellular space, extracellular matrix, basement membrane. Major component.

Expression : Expressed in heart, lung, kidney, skeletal muscle, pancreas, retina and placenta. Little or no expression in brain and liver.

Tag : hot

Sort : 1356

No3 : ab14509

No4 : 1

Host : Rabbit

Modifications : Unmodified
