

Lck (PT0416R) PT® Rabbit mAb

Catalog No: YM8258

Reactivity: Human; Mouse; Rat;

Applications: WB;IHC;IF;IP;ELISA

Target: Lck

Fields: >>NF-kappa B signaling pathway;>>Osteoclast differentiation;>>Natural killer

cell mediated cytotoxicity;>>Th1 and Th2 cell differentiation;>>Th17 cell

differentiation;>>T cell receptor signaling pathway;>>Yersinia infection;>>Human T-cell leukemia virus 1 infection;>>PD-L1 expression and PD-1 checkpoint

pathway in cancer;>>Primary immunodeficiency

Gene Name: LCK

Protein Name: Tyrosine-protein kinase Lck

P06239

P06240

Human Gene Id: 3932

Human Swiss Prot

No:

Mouse Gene Id: 16818

Mouse Swiss Prot

No:

Rat Gene Id: 313050

Rat Swiss Prot No: Q01621

Specificity: endogenous

Formulation: PBS, 50% glycerol, 0.05% Proclin 300, 0.05%BSA

Source : Monoclonal, rabbit, IgG, Kappa

Dilution: IHC 1:200-1:1000;WB 1:500-1:2000;IF 1:200-1:1000;ELISA 1:5000-1:20000;IP

1:50-1:200;

No4:

Host:

1

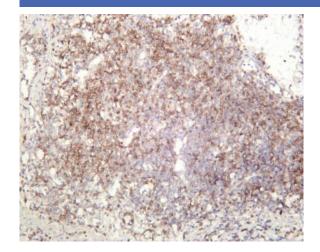

Rabbit

Best Tools for immunology Research Protein A **Purification:** -15°C to -25°C/1 year(Do not lower than -25°C) **Storage Stability: Molecularweight:** 58kD Observed Band: 58kD Natural killer cell mediated cytotoxicity; T Cell Receptor; Primary **Cell Pathway:** immunodeficiency; **Background:** This gene is a member of the Src family of protein tyrosine kinases (PTKs). The encoded protein is a key signaling molecule in the selection and maturation of developing T-cells. It contains N-terminal sites for myristylation and palmitylation, a PTK domain, and SH2 and SH3 domains which are involved in mediating protein-protein interactions with phosphotyrosine-containing and proline-rich motifs, respectively. The protein localizes to the plasma membrane and pericentrosomal vesicles, and binds to cell surface receptors, including CD4 and CD8, and other signaling molecules. Multiple alternatively spliced variants encoding different isoforms have been described. [provided by RefSeq, Aug 2016]. **Function:** catalytic activity:ATP + a [protein]-L-tyrosine = ADP + a [protein]-L-tyrosine phosphate..disease: A chromosomal aberration involving LCK is found in leukemias. Translocation t(1;7)(p34;q34) with TCRB.,domain:The SH2 domain mediates interaction with SQSTM1. Interaction is regulated by Ser-59 phosphorylation., enzyme regulation: Inhibited by tyrosine phosphorylation.,function:Tyrosine kinase that plays an essential role for the selection and maturation of developing T-cell in the thymus and in mature T-cell function. Is constitutively associated with the cytoplasmic portions of the CD4 and CD8 surface receptors and plays a key role in T-cell antigen receptor(TCR)-linked signal transduction pathways. Association of the TCR with a peptide antigenbound MHC complex facilitates the interaction of CD4 and CD8 with MHC class II and class I molecules, respectively, and thereby recruits the associat Subcellular Cytoplasm, Membrane Location: Expressed specifically in lymphoid cells. **Expression:** Tag: hot,recombinant Sort: 1297

Rat colon was stained with anti-Lck (PT0416R) rabbit antibody

Various whole cell lysates were separated by 4-20% SDS-PAGE, and the membrane was blotted with anti-Lck (PT0416R) antibody. The HRP-conjugated Goat anti-Rabbit IgG(H + L) antibody was used to detect the antibody. Lane 1: Jurkat Lane 2: Ramos Lane 3: Mouse spleen Predicted band size: 58kDa Observed band size: 58kDa

Human tonsil was stained with anti-Lck (PT0416R) rabbit antibody
