

Pax-8 Polyclonal Antibody

Catalog No :	YT3602			
Reactivity :	Human;Mouse;Rat			
Applications :	WB;IHC;IF;ELISA			
Target :	Pax-8			
Fields :	>>Thyroid hormone synthesis;>>Pathways in cancer;>>Transcriptional misregulation in cancer;>>Thyroid cancer			
Gene Name :	PAX8			
Protein Name :	Paired box protein Pax-8			
Human Gene Id :	7849			
Human Swiss Prot No :	Q06710			
Mouse Gene Id :	18510			
Mouse Swiss Prot	Q00288			
No : Rat Gene Id :	81819			
Rat Swiss Prot No :	P51974			
Immunogen :	The antiserum was produced against synthesized peptide derived from human Pax-8. AA range:145-194			
Specificity :	Pax-8 Polyclonal Antibody detects endogenous levels of Pax-8 protein.			
Formulation :	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.			
Source :	Polyclonal, Rabbit,IgG			
Dilution :	WB 1:500 - 1:2000. IHC 1:100 - 1:300. ELISA: 1:10000 IF 1:50-200			

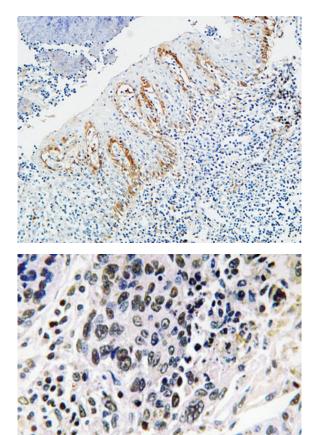

0	,			
Purification :	The antibody was affinity-purified from rabbit antiserum by affinity-			
	chromatography using epitope-specific immunogen.			
Concentration :	1 mg/ml			
Storage Stability :	-15°C to -25°C/1 year(Do not lower than -25°C)			
Observed Band :	62kD			
Cell Pathway :	Pathways in cancer; Thyroid cancer;			
Background :	This gene encodes a member of the paired box (PAX) family of transcription factors. Members of this gene family typically encode proteins that contain a paired box domain, an octapeptide, and a paired-type homeodomain. This nuclear protein is involved in thyroid follicular cell development and expression of thyroid-specific genes. Mutations in this gene have been associated with thyroid dysgenesis, thyroid follicular carcinomas and atypical follicular thyroid adenomas. Alternatively spliced transcript variants encoding different isoforms have been described. [provided by RefSeq, Mar 2010],			
Function :	caution:The sequence shown here is derived from an Ensembl automatic analysis pipeline and should be considered as preliminary data.,developmental stage:In developing excretory system, during thyroid differentiation and in adult thyroid.,disease:Defects in PAX8 are the cause of congenital hypothyroidism non- goitrous type 2 (CHNG2) [MIM:218700]. CHNG2 is a disease characterized by thyroid dysgenesis, the most frequent cause of congenital hypothyroidism, accounting for 85% of case. The thyroid gland can be completely absent (athyreosis), ectopically located and/or severely hypoplastic. Ectopic thyroid gland is the most frequent malformation, with thyroid tissue being found most often at the base of the tongue.,function:Transcription factor for the thyroid-specific expression of the genes exclusively expressed in the thyroid cell type, maintaining the functional differentiation of such cell			
Subcellular Location :	Nucleus.			
Expression :	Expressed in the excretory system, thyroid gland and Wilms tumors.			
Sort :	11655			
No4 :	1			
Host :	Rabbit			
Modifications :	Unmodified
