**Background:** potassium two pore domain channel subfamily K member 12(KCNK12) Homo

sapiens This gene encodes one of the members of the superfamily of potassium channel proteins containing two pore-forming P domains. The product of this gene has not been shown to be a functional channel, however, it may require other non-pore-forming proteins for activity. [provided by RefSeq, Jul 2008],

**Function:** function:Probable potassium channel subunit. No channel activity observed in

heterologous systems. May need to associate with another protein to form a functional channel., similarity: Belongs to the two pore domain potassium channel

(TC 1.A.1.8) family., subunit: Heterodimer.,

Subcellular Location :

Membrane; Multi-pass membrane protein.

**Expression:** Epithelium,PNS,

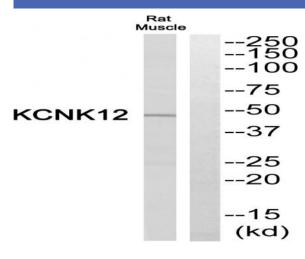

**Sort :** 17102

**No4**: 1

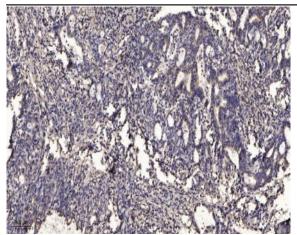

Host: Rabbit

Modifications: Unmodified
