

## Translin Polyclonal Antibody

<b>Catalog No :</b>	YT4722
<b>Reactivity :</b>	Human;Mouse;Rat
<b>Applications :</b>	WB;IHC;IF;ELISA
<b>Target :</b>	Translin
<b>Gene Name :</b>	TSN
<b>Protein Name :</b>	Translin
<b>Human Gene Id :</b>	7247
<b>Human Swiss Prot No :</b>	Q15631
<b>Mouse Gene Id :</b>	22099
<b>Mouse Swiss Prot No :</b>	Q62348
<b>Immunogen :</b>	The antiserum was produced against synthesized peptide derived from human TSN. AA range:101-150
<b>Specificity :</b>	Translin Polyclonal Antibody detects endogenous levels of Translin protein.
<b>Formulation :</b>	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
<b>Source :</b>	Polyclonal, Rabbit,IgG
<b>Dilution :</b>	WB 1:500 - 1:2000. IHC 1:100 - 1:300. ELISA: 1:40000.. IF 1:50-200
<b>Purification :</b>	The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.
<b>Concentration :</b>	1 mg/ml
<b>Storage Stability :</b>	-15°C to -25°C/1 year(Do not lower than -25°C)

**Observed Band :** 26kD

---

**Background :** This gene encodes a DNA-binding protein which specifically recognizes conserved target sequences at the breakpoint junction of chromosomal translocations. Translin polypeptides form a multimeric structure that is responsible for its DNA-binding activity. Recombination-associated motifs and translin-binding sites are present at recombination hotspots and may serve as indicators of breakpoints in genes which are fused by translocations. These binding activities may play a crucial role in chromosomal translocation in lymphoid neoplasms. This protein encoded by this gene, when complexed with translin-associated protein X, also forms a Mg ion-dependent endoribonuclease that promotes RNA-induced silencing complex (RISC) activation. Alternative splicing results in multiple transcript variants. [provided by RefSeq, May 2012],

---

**Function :** function:DNA-binding protein that specifically recognizes consensus sequences at the breakpoint junctions in chromosomal translocations, mostly involving immunoglobulin (Ig)/T-cell receptor gene segments. Seems to recognize single-stranded DNA ends generated by staggered breaks occurring at recombination hot spots.,similarity:Belongs to the translin family.,subunit:Forms a multimeric ring-shaped structure. Interacts with TSNAX.,

---

**Subcellular Location :** Cytoplasm . Nucleus .

---

**Expression :** Liver,Lung,

---

**Sort :** 23497

---

**No4 :** 1

---

**Host :** Rabbit

---

**Modifications :** Unmodified
