Concentration: 1 mg/ml -15°C to -25°C/1 year(Do not lower than -25°C) **Storage Stability: Molecularweight:** 20kD **Function:** Essential for the synthesis of various steroid hormones . Participates in the reduction of mitochondrial cytochrome P450 for steroidogenesis . Transfers electrons from adrenodoxin reductase to CYP11A1, a cytochrome P450 that catalyzes cholesterol side-chain cleavage. Does not form a ternary complex with adrenodoxin reductase and CYP11A1 but shuttles between the two enzymes to transfer electrons (By similarity). Subcellular Mitochondrion matrix. Location: **Expression:** Highest levels in the adrenal gland (at protein level). Also detected in kidney and testis (at protein level). Tag: hot Sort: No4: Host: Rabbit
