

Cleaved-C1s HC (R437) Polyclonal Antibody

Catalog No: YC0020

Reactivity: Human;Rat

Applications: WB;ELISA

Target: C1S

Fields: >>Complement and coagulation cascades;>>Pertussis;>>Staphylococcus

aureus infection;>>Coronavirus disease - COVID-19;>>Systemic lupus

erythematosus

Gene Name: C1S

Protein Name: Complement C1s subcomponent

P09871

Human Gene Id: 716

Human Swiss Prot

No:

Immunogen: The antiserum was produced against synthesized peptide derived from human

C1S. AA range:388-437

Specificity: Cleaved-C1s HC (R437) Polyclonal Antibody detects endogenous levels of

fragment of activated C1s HC protein resulting from cleavage adjacent to R437.

Formulation: Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

Dilution: WB 1:500 - 1:2000. ELISA: 1:20000. Not yet tested in other applications.

Purification: The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

Concentration: 1 mg/ml

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

1/3

Observed Band: 47kD,76kD

Cell Pathway: Complement and coagulation cascades; Systemic lupus erythematosus;

Background: This gene encodes a serine protease, which is a major constituent of the human

complement subcomponent C1. C1s associates with two other complement components C1r and C1q in order to yield the first component of the serum complement system. Defects in this gene are the cause of selective C1s

deficiency. [provided by RefSeq, Mar 2009],

Function: catalytic activity:Cleavage of Arg-|-Ala bond in complement component C4 to

form C4a and C4b, and Lys(or Arg)-|-Lys bond in complement component C2 to form C2a and C2b: the 'classical' pathway C3 convertase.,disease:Defects in C1S are the cause of selective C1s deficiency [MIM:120580]; that is associated with early onset multiple autoimmune diseases.,enzyme regulation:Inhibited by SERPING1.,function:C1s B chain is a serine protease that combines with C1q and C1s to form C1, the first component of the classical pathway of the complement system. C1r activates C1s so that it can, in turn, activate C2 and C4.,online information:C1S mutation db,PTM:The iron and 2-oxoglutarate dependent 3-hydroxylation of aspartate and asparagine is (R) stereospecific

within EGF domains., similarity: Belongs to the peptidase S1

family., similarity: Contains 1 EGF-like domain., similarity: Contains 1 peptidase S1

dom

Subcellular

Location:

extracellular region, extracellular exosome, blood microparticle,

Expression: Liver, Peripheral blood leukocyte, Plasma, PNS,

Tag: orthogonal

Sort: 4143

No4: 1

Host: Rabbit

Modifications: Unmodified
