

## CD31 (phospho Tyr713) Polyclonal Antibody

Catalog No: YP0530

**Reactivity:** Human; Mouse

**Applications:** WB;IHC;IF;ELISA

Target: CD31

**Fields:** >>Cell adhesion molecules;>>Leukocyte transendothelial

migration;>>Malaria;>>Fluid shear stress and atherosclerosis

Gene Name: PECAM1

**Protein Name:** Platelet endothelial cell adhesion molecule

P16284

Q08481

Human Gene Id: 5175

**Human Swiss Prot** 

No:

Mouse Gene Id: 18613

**Mouse Swiss Prot** 

No:

Immunogen: The antiserum was produced against synthesized peptide derived from human

PECAM-1 around the phosphorylation site of Tyr713. AA range:686-735

Specificity: Phospho-CD31 (Y713) Polyclonal Antibody detects endogenous levels of CD31

protein only when phosphorylated at Y713.

**Formulation :** Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

**Dilution:** WB 1:500 - 1:2000. IHC 1:100 - 1:300. IF 1:200 - 1:1000. ELISA: 1:20000. Not

yet tested in other applications.

**Purification:** The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

**Concentration**: 1 mg/ml

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Observed Band: 150kD

**Cell Pathway:** Cell adhesion molecules (CAMs);Leukocyte transendothelial migration;

**Background:** The protein encoded by this gene is found on the surface of platelets,

monocytes, neutrophils, and some types of T-cells, and makes up a large portion of endothelial cell intercellular junctions. The encoded protein is a member of the immunoglobulin superfamily and is likely involved in leukocyte migration,

angiogenesis, and integrin activation. [provided by RefSeq, May 2010],

**Function:** function: This protein is a cell adhesion molecule expressed on platelets and at

endothelial cell intercellular junctions.,online information:CD31 entry,online information:PECAM-1,online information:The Singapore human mutation and polymorphism database,PTM:Phosphorylated on Ser and Tyr residues after cellular activation.,similarity:Contains 6 lg-like C2-type (immunoglobulin-like) domains.,tissue specificity:Long isoform predominates all tissues examined, isoform Delta12 was detected only in trachea and isoform Delta14-15 only in lung.

isoform Delta14 was detected in all tissues examined with the strongest

expression in heart.,

Subcellular

Cell membrane ; Single-pass type I membrane protein . Cell surface expression on neutrophils is down-regulated upon fMLP or CXCL8/IL8-mediated stimulation.

.; [Isoform Long]: Cell membrane; Single-pass type I membrane protein. Membrane raft. Cell junction. Localizes to the lateral border recycling compartment (LBRC) and recycles from the LBRC to the junction in resting endothelial cells. .; [Isoform Delta15]: Cell junction. Localizes to the lateral border recycling compartment (LBRC) and recycles from the LBRC to the junction in

resting endothelial cells.

**Expression:** Expressed on platelets and leukocytes and is primarily concentrated at the

borders between endothelial cells (PubMed:18388311, PubMed:21464369). Expressed in human umbilical vein endothelial cells (HUVECs) (at protein level) (PubMed:19342684, PubMed:17580308). Expressed on neutrophils (at protein level) (PubMed:17580308). Isoform Long predominates in all tissues examined

(PubMed:12433657). Isoform Delta12 is detected only in trachea

(PubMed:12433657). Isoform Delta14-15 is only detected in lung

(PubMed:12433657). Isoform Delta14 is detected in all tissues examined with the strongest expression in heart (PubMed:12433657). Isoform Delta15 is expressed in brain, testis, ovary, cell surface of platelets, human umbilical vein endothelial

cells (HUVECs), Jurkat T-cell leukemia, human erythroleuk
