Background:]RASGRF1 (Ras Protein Specific Guanine Nucleotide Releasing Factor 1) is a

Protein Coding gene. Diseases associated with RASGRF1 include bleeding disorder, platelet-type, 18 and refractive error. Among its related pathways are Signaling by GPCR and Immune System. GO annotations related to this gene include guanyl-nucleotide exchange factor activity and Ras guanyl-nucleotide exchange factor activity. An important paralog of this gene is RALGDS. romotes

the exchange of Ras-bound GDP by GTP.
