

ErbB-3 (phospho Tyr1222) Polyclonal Antibody

Catalog No: YP0923

Reactivity: Human; Mouse; Rat

Applications: WB;IHC;IF;ELISA

Target: ErbB-3/her2

Fields: >>EGFR tyrosine kinase inhibitor resistance;>>MAPK signaling

pathway;>>ErbB signaling pathway;>>Calcium signaling pathway;>>PI3K-Akt

signaling pathway;>>Proteoglycans in cancer;>>MicroRNAs in cancer

Gene Name: ERBB3

Protein Name: Receptor tyrosine-protein kinase erbB-3

P21860

Q61526

Human Gene Id: 2065

Human Swiss Prot

No:

Mouse Gene Id: 13867

Mouse Swiss Prot

No:

Rat Gene Id: 29496

Rat Swiss Prot No: Q62799

Immunogen: The antiserum was produced against synthesized peptide derived from human

HER3 around the phosphorylation site of Tyr1222. AA range:1191-1240

Specificity: Phospho-ErbB-3 (Y1222) Polyclonal Antibody detects endogenous levels of

ErbB-3 protein only when phosphorylated at Y1222.

Formulation : Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source : Polyclonal, Rabbit, IgG

1/4

Dilution: WB 1:500 - 1:2000, IHC 1:100 - 1:300, IF 1:200 - 1:1000, ELISA: 1:20000, Not

yet tested in other applications.

Purification: The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

Concentration: 1 mg/ml

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Observed Band: 148kD

Cell Pathway: ErbB_HER;Calcium;Endocytosis;

Background : This gene encodes a member of the epidermal growth factor receptor (EGFR)

family of receptor tyrosine kinases. This membrane-bound protein has a

neuregulin binding domain but not an active kinase domain. It therefore can bind this ligand but not convey the signal into the cell through protein phosphorylation. However, it does form heterodimers with other EGF receptor family members which do have kinase activity. Heterodimerization leads to the activation of pathways which lead to cell proliferation or differentiation. Amplification of this gene and/or overexpression of its protein have been reported in numerous cancers, including prostate, bladder, and breast tumors. Alternate transcriptional

splice variants encoding different isoforms have been characterized. One isoform lacks the intermembrane region and is secreted outside the cell. This form acts to

modulate the activity of the m

Function : catalytic activity:ATP + a [protein]-L-tyrosine = ADP + a [protein]-L-tyrosine

phosphate.,disease:Defects in ERBB3 are the cause of lethal congenital

contracture syndrome type 2 (LCCS2) [MIM:607598]; also called Israeli Bedouin multiple contracture syndrome type A. LCCS2 is an autosomal recessive neurogenic form of a neonatally lethal arthrogryposis that is associated with atrophy of the anterior horn of the spinal cord. The LCCS2 syndrome is

characterized by multiple joint contractures, anterior horn atrophy in the spinal cord, and a unique feature of a markedly distended urinary bladder. The

phenotype suggests a spinal cord neuropathic etiology., disease: Overexpressed in a subset of human mammary tumors., domain: The cytoplasmic part of the

receptor may interact with the SH2 or SH3 domains of many signal-transducing proteins., function: Binds and is activated by neuregulins and NTAK., PTM:Li

Subcellular Location:

[Isoform 1]: Cell membrane; Single-pass type I membrane protein.; [Isoform 2]:

Secreted.

Expression: Epithelial tissues and brain.

Tag: orthogonal
