

Skp2 (Phospho Ser64) rabbit pAb

Catalog No: YP1496

Reactivity: Human; Rat; Mouse;

Applications: WB;ELISA;IHC

Target: Skp2

Fields: >>FoxO signaling pathway;>>Cell cycle;>>Ubiquitin mediated

proteolysis;>>mTOR signaling pathway;>>Epstein-Barr virus

infection;>>Pathways in cancer;>>Viral carcinogenesis;>>Small cell lung cancer

Gene Name: SKP2 FBXL1

Protein Name: Skp2 (Ser64)

Q13309

Q9Z0Z3

Human Gene Id: 6502

Human Swiss Prot

No:

Mouse Gene Id: 27401

Mouse Swiss Prot

No:

Immunogen: Synthesized phosho peptide around human Skp2 (Ser64)

Specificity: This antibody detects endogenous levels of Human Skp2 (phospho-Ser64)

Formulation : Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

Dilution: WB 1:500-2000;IHC 1:50-300; ELISA 2000-20000

Purification: The antibody was affinity-purified from rabbit serum by affinity-chromatography

using specific immunogen.

Concentration: 1 mg/ml

1/3

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Observed Band: 47kD

Cell Pathway: Cell_Cycle_G1S;Cell_Cycle_G2M_DNA;Ubiquitin mediated

proteolysis; Pathways in cancer; Small cell lung cancer;

Background: This gene encodes a member of the F-box protein family which is characterized

by an approximately 40 amino acid motif, the F-box. The F-box proteins constitute

one of the four subunits of ubiquitin protein ligase complex called SCFs

(SKP1-cullin-F-box), which function in phosphorylation-dependent ubiquitination. The F-box proteins are divided into 3 classes: Fbws containing WD-40 domains, Fbls containing leucine-rich repeats, and Fbxs containing either different protein-protein interaction modules or no recognizable motifs. The protein encoded by this gene belongs to the Fbls class; in addition to an F-box, this protein contains 10 tandem leucine-rich repeats. This protein is an essential element of the cyclin

A-CDK2 S-phase kinase. It specifically recognizes phosphorylated cyclindependent kinase inhibitor 1B (CDKN1B, also referred to as p27 or KIP1)

predominantly in S phase and int

Function: function:Substrate recognition component of a SCF (SKP1-CUL1-F-box protein)

E3 ubiquitin-protein ligase complex which mediates the ubiquitination and subsequent proteasomal degradation of target proteins involved in cell cycle progression, signal transduction and transcription. Specifically recognizes phosphorylated CDKN1B/p27kip and is involved in regulation of G1/S transition. Degradation of CDKN1B/p27kip also requires CKS1. Recognizes target proteins ORC1L, CDT1, RBL2, MLL, CDK9, RAG2, FOXO1A, UBP43, and probably MYC, TOB1 and TAL1. Degradation of TAL1 also requires STUB1. Recognizes CDKN1A in association with CCNE1 or CCNE2 and CDK2.,pathway:Protein

modification; protein ubiquitination., similarity: Contains 1 F-box

domain.,similarity:Contains 8 LRR (leucine-rich) repeats.,subunit:Part of the SCF(SKP2) complex consisting of CUL1, RBX1, SKP1 and SKP2. Interacts

directly with CUL1 and SK

Subcellular Location:

Cytoplasm . Nucleus .

Expression : Epithelium, Liver, Placenta, Prostatic carcinoma,

-

Sort : 16357

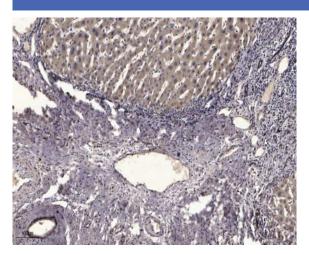

Host: Rabbit

Modifications: Phospho
