

Integrin β2 (phospho Thr758) Polyclonal Antibody

Catalog No: YP1171

Reactivity: Human; Mouse; Rat

Applications: WB;IHC

Target: Integrin β2

Fields: >>Rap1 signaling pathway;>>Phagosome;>>Hippo signaling pathway;>>Cell

adhesion molecules;>>Complement and coagulation cascades;>>Neutrophil

extracellular trap formation;>>Natural killer cell mediated

cytotoxicity;>>Leukocyte transendothelial migration;>>Regulation of actin cytoske leton;>>Pertussis;>>Legionellosis;>>Leishmaniasis;>>Malaria;>>Amoebiasis;>> Staphylococcus aureus infection;>>Tuberculosis;>>Human T-cell leukemia virus

1 infection;>>Rheumatoid arthritis;>>Viral myocarditis

Gene Name: ITGB2

Protein Name: Integrin beta-2

P05107

P11835

Human Gene Id: 3689

Human Swiss Prot

No:

Mouse Gene Id: 16414

Mouse Swiss Prot

No:

Immunogen: The antiserum was produced against synthesized peptide derived from human

CD18/ITGB2 around the phosphorylation site of Thr758. AA range:720-769

Specificity: Phospho-Integrin β2 (T758) Polyclonal Antibody detects endogenous levels of

Integrin \(\beta 2 \) protein only when phosphorylated at T758.

Formulation : Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

WB 1:500-2000;IHC 1:50-300

Ditrification: The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

Concentration: 1 mg/ml

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Observed Band: 170kD

Cell Pathway: Cell adhesion molecules (CAMs);Natural killer cell mediated

cytotoxicity;Leukocyte transendothelial migration;Regulates Actin and

Cytoskeleton; Viral myocarditis;

Background: This gene encodes an integrin beta chain, which combines with multiple different

alpha chains to form different integrin heterodimers. Integrins are integral cellsurface proteins that participate in cell adhesion as well as cell-surface mediated signalling. The encoded protein plays an important role in immune response and defects in this gene cause leukocyte adhesion deficiency. Alternative splicing

results in multiple transcript variants. [provided by RefSeg, Dec 2014],

Function: disease:Defects in ITGB2 are the cause of leukocyte adhesion deficiency type I

(LAD1) [MIM:116920]. LAD1 patients have recurrent bacterial infections and their

leukocytes are deficient in a wide range of adhesion-dependent

functions.,function:Integrin alpha-L/beta-2 is a receptor for ICAM1, ICAM2, ICAM3 and ICAM4. Integrins alpha-M/beta-2 and alpha-X/beta-2 are receptors for the iC3b fragment of the third complement component and for fibrinogen. Integrin alpha-X/beta-2 recognizes the sequence G-P-R in fibrinogen alpha-chain. Integrin alpha-M/beta-2 recognizes P1 and P2 peptides of fibrinogen gamma chain. Integrin alpha-M/beta-2 is also a receptor for factor X. Integrin alpha-D/beta-2 is a receptor for ICAM3 and VCAM1.,online information:ITGB2 mutation

db.PTM:Both Ser-745 and Ser-756 become phosphorylated when T-cells are

exposed to phorbol esters. Phosphorylation on Thr-758 (but not on S

Subcellular Cell membrane ; Single-pass type I membrane protein . Membrane raft ; Single-

Location : pass type I membrane protein .

Expression : Leukocytes (PubMed:23775590). Expressed in neutrophils (at protein level)

(PubMed:21193407, PubMed:28807980).

Tag: orthogonal

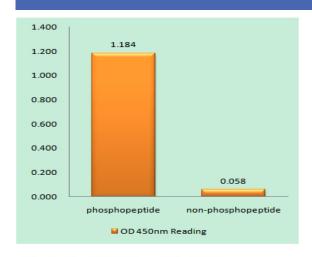

Sort: 8620

No4: 1

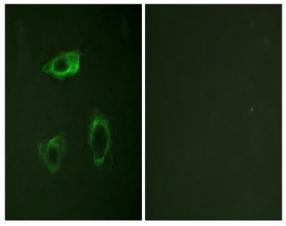

Host: Rabbit

Modifications: Phospho
