

ALK (Phospho Tyr1078) rabbit pAb

Catalog No: YP1256

Reactivity: Human; Rat; Mouse;

Applications: WB

Target: ALK

Fields: >>Pathways in cancer;>>Non-small cell lung cancer;>>PD-L1 expression and

PD-1 checkpoint pathway in cancer

Gene Name: ALK

Protein Name: ALK (Tyr1078)

Q9UM73

P97793

Human Gene Id: 238

Human Swiss Prot

No:

Mouse Gene Id: 11682

Mouse Swiss Prot

No:

Immunogen: Synthesized phosho peptide around human ALK (Tyr1078)

Specificity: This antibody detects endogenous levels of Human ALK (phospho-Tyr1078)

Formulation : Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

Dilution: WB 1:1000-2000

Purification: The antibody was affinity-purified from rabbit serum by affinity-chromatography

using specific immunogen.

Concentration: 1 mg/ml

1/3

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Observed Band: 150-240kD

Background:

This gene encodes a receptor tyrosine kinase, which belongs to the insulin receptor superfamily. This protein comprises an extracellular domain, an hydrophobic stretch corresponding to a single pass transmembrane region, and an intracellular kinase domain. It plays an important role in the development of the brain and exerts its effects on specific neurons in the nervous system. This gene has been found to be rearranged, mutated, or amplified in a series of tumours including anaplastic large cell lymphomas, neuroblastoma, and non-small cell lung cancer. The chromosomal rearrangements are the most common genetic alterations in this gene, which result in creation of multiple fusion genes in tumourigenesis, including ALK (chromosome 2)/EML4 (chromosome 2), ALK/RANBP2 (chromosome 2), ALK/ATIC (chromosome 2), ALK/TFG (chromosome 3), ALK/NPM1 (chromosome 5), ALK/SQSTM1 (chromosome

Function:

catalytic activity:ATP + a [protein]-L-tyrosine = ADP + a [protein]-L-tyrosine phosphate.,disease:A chromosomal aberration involving ALK is associated with anaplastic large-cell lymphoma (ALCL). Translocation t(2;17)(p23;q25) with ALO17.,disease:A chromosomal aberration involving ALK is associated with inflammatory myofibroblastic tumors (IMTs). Translocation t(2;11)(p23;p15) with CARS; translocation t(2;4)(p23;q21) with SEC31A.,disease:A chromosomal aberration involving ALK is found in a form of non-Hodgkin lymphoma. Translocation t(2;5)(p23;q35) with NPM1. The resulting chimeric NPM1-ALK protein homodimerize and the kinase becomes constitutively activated. The constitutively active fusion proteins are responsible for 5-10% of non-Hodgkin lymphomas.,function:Orphan receptor with a tyrosine-protein kinase activity. Appears to play an important role in the normal development and function

Subcellular Location:

Cell membrane; Single-pass type I membrane protein. Membrane attachment is essential for promotion of neuron-like differentiation and cell proliferation arrest through specific activation of the MAP kinase pathway.

Expression:

Expressed in brain and CNS. Also expressed in the small intestine and testis, but not in parmal hymphoid calls

but not in normal lymphoid cells.

Tag: orthogonal

Sort : 1904

No4: 1

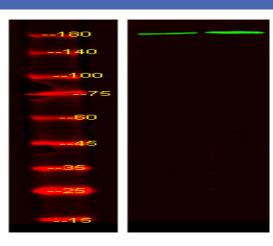

Host: Rabbit

Modifications: Phospho
