

NFAT1 (Phospho Ser326) rabbit pAb

Catalog No: YP1673

Reactivity: Human; Mouse; Rat

Applications: WB

Target: NFAT1

Fields: >>cGMP-PKG signaling pathway;>>Cellular senescence;>>Wnt signaling

pathway;>>Axon guidance;>>VEGF signaling pathway;>>Osteoclast

differentiation;>>C-type lectin receptor signaling pathway;>>Natural killer cell

mediated cytotoxicity;>>Th1 and Th2 cell differentiation;>>Th17 cell

differentiation;>>T cell receptor signaling pathway;>>B cell receptor signaling pathway;>>Oxytocin signaling pathway;>>Yersinia infection;>>Hepatitis B;>>Human cytomegalovirus infection;>>Human T-cell leukemia virus 1 infection;>>Kaposi sarcoma-associated herpesvirus infection;>>Human immunodeficiency virus 1 infection;>>PD-L1 expression and PD-1 checkpoint

pathway in cancer;>>Lipid and atherosclerosis

Gene Name: NFATC2 NFAT1 NFATP

Protein Name: NFAT1 (Phospho-Ser326)

Human Gene Id: 4773

Human Swiss Prot

No:

Mouse Gene Id: 18019

Mouse Swiss Prot

No:

Q60591

Q13469

Immunogen: Synthesized peptide derived from human NFAT1 (Phospho-Ser326)

Specificity: This antibody detects endogenous levels of NFAT1 (Phospho-Ser326) at

Human, Mouse, Rat

Formulation: Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

Dilution: WB 1:500-2000

Purification: The antibody was affinity-purified from rabbit serum by affinity-chromatography

using specific immunogen.

Concentration: 1 mg/ml

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Observed Band: 100kD

Background: This gene is a member of the nuclear factor of activated T cells (NFAT) family.

The product of this gene is a DNA-binding protein with a REL-homology region (RHR) and an NFAT-homology region (NHR). This protein is present in the cytosol and only translocates to the nucleus upon T cell receptor (TCR)

stimulation, where it becomes a member of the nuclear factors of activated T cells transcription complex. This complex plays a central role in inducing gene

transcription during the immune response. Alternate transcriptional splice variants encoding different isoforms have been characterized. [provided by RefSeq, Apr

2012],

Function: alternative products:Additional isoforms seem to exist,domain:Rel Similarity

Domain (RSD) allows DNA-binding and cooperative interactions with AP1 factors.,function:Plays a role in the inducible expression of cytokine genes in T-

cells, especially in the induction of the IL-2, IL-3, IL-4, TNF-alpha or GM-CSF.,induction:Inducibly expressed in T-lymphocytes upon activation of the T-cell

receptor (TCR) complex. Induced after co-addition of phorbol 12-myristate 13-acetate (PMA) and ionomycin.,PTM:In resting cells, phosphorylated by NFATC-kinase on at least 18 sites in the 99-363 region. Upon cell stimulation, all

these sites except Ser-243 are dephosphorylated by calcineurin.

Dephosphorylation induces a conformational change that simultaneously exposes an NLS and masks an NES, which results in nuclear localization. Simultaneously,

Ser-53 or Ser-56 is phosphorylated; which is required for full

Subcellular Location:

Cytoplasm. Nucleus. Cytoplasmic for the phosphorylated form and nuclear after activation that is controlled by calcineurin-mediated dephosphorylation. Rapid

nuclear exit of NFATC is thought to be one mechanism by which cells distinguish between sustained and transient calcium signals. The subcellular localization of

NFATC plays a key role in the regulation of gene transcription.

Expression: Expressed in thymus, spleen, heart, testis, brain, placenta, muscle and

pancreas. Isoform 1 is highly expressed in the small intestine, heart, testis, prostate, thymus, placenta and thyroid. Isoform 3 is highly expressed in stomach,

uterus, placenta, trachea and thyroid.

Tag: orthogonal

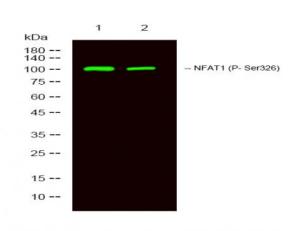

Sort : 25155

No4: 1

Host: Rabbit

Modifications: Phospho
