

HSL Phospho Ser660 rabbit pAb

Catalog No: YP1799

Reactivity: Human; Mouse; Rat

Applications: WB

Target: HSL

Fields: >>cAMP signaling pathway;>>AMPK signaling pathway;>>Apelin signaling

pathway;>>Thermogenesis;>>Insulin signaling pathway;>>Regulation of lipolysis

in adipocytes;>>Aldosterone synthesis and secretion

Gene Name: LIPE

Protein Name: HSL Ser660

Q05469

P54310

Human Gene Id: 3991

Human Swiss Prot

No:

Mouse Gene Id: 16890

Mouse Swiss Prot

No:

Rat Gene ld: 25330

Rat Swiss Prot No: P15304

Immunogen: Synthesized peptide derived from human HSL Ser660

Specificity: This antibody detects endogenous levels of HSL Ser660 at Human, Mouse, Rat

Formulation : Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

Dilution : WB 1:500-2000

1/3

Purification: The antibody was affinity-purified from rabbit serum by affinity-chromatography

using specific immunogen.

Concentration: 1 mg/ml

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Molecularweight: 118kD

Background: The protein encoded by this gene has a long and a short form, generated by use

of alternative translational start codons. The long form is expressed in

steroidogenic tissues such as testis, where it converts cholesteryl esters to free cholesterol for steroid hormone production. The short form is expressed in adipose tissue, among others, where it hydrolyzes stored triglycerides to free fatty

acids. [provided by RefSeq, Jul 2008],

Function: catalytic activity:Diacylglycerol + H(2)O = monoacylglycerol + a

carboxylate.,catalytic activity:Monoacylglycerol + H(2)O = glycerol + a carboxylate.,catalytic activity:Triacylglycerol + H(2)O = diacylglycerol + a carboxylate.,enzyme regulation:Rapidly activated by cAMP-dependent

phosphorylation under the influence of catecholamines. Dephosphorylation and inactivation are controlled by insulin.,function:In adipose tissue and heart, it primarily hydrolyzes stored triglycerides to free fatty acids, while in steroidogenic tissues, it principally converts cholesteryl esters to free cholesterol for steroid

hormone production.,pathway:Glycerolipid metabolism; triacylglycerol

degradation., similarity: Belongs to the 'GDXG' lipolytic enzyme family., subcellular location: Found in the high-density caveolae. Translocates to the cytoplasm from

the caveolae upon insulin stimulation., subunit: Interacts wi

Subcellular Location:

Cell membrane . Membrane, caveola . Cytoplasm, cytosol . Lipid droplet . Found in the high-density caveolae. Translocates to the cytoplasm from the caveolae upon insulin stimulation (PubMed:17026959). Phosphorylation by AMPK reduces

its translocation towards the lipid droplets (By similarity). .

Expression : Testis.

Sort : 25278

No4: 1

Host: Rabbit

Modifications : Phospho
