

## CD62P (PN0132) Nb-FC recombinant antibody

Catalog No: YA0430

Reactivity: Human

**Applications:** ELISA

Target: CD62P

Gene Name: SELP GMRP GRMP

Protein Name: P-selectin (CD62 antigen-like family member P) (Granule membrane protein

140) (GMP-140) (Leukocyte-endothelial cell adhesion molecule 3) (LECAM3)

(Platelet activation dependent granule-external membra

Human Gene Id: 6403

**Human Swiss Prot** 

No:

Immunogen: Purified recombinant Human CD62P

P16109

**Specificity:** This recombinant monoclonal antibody can detects endogenous levels of

CD62P protein.

**Formulation :** Phosphate-buffered solution

**Source:** Camel, chimeric fusion of Nanobody (VHH) and mouse IgG1 Fc domain,

recombinantly produced from 293F cell

**Dilution:** ELISA 1:5000-100000

**Purification:** Recombinant Expression and Affinity purified

**Concentration :** Please check the information on the tube

Storage Stability: -15°C to -25°C/1 year(Avoid freeze / thaw cycles)

Background: CD62P is a 140 kD type I transmembrane glycoprotein also known as P-

selectin, platelet activation-dependent granule membrane protein (PADGEM),

and GMP-140. It is expressed on activated platelets, megakaryocytes, and endothelial cells. CD62P is primarily stored in secretory  $\alpha$ -granules in platelets and Weibel-Palade bodies in endothelial cells, and is rapidly relocated to the plasma membrane upon activation. The ligands for CD62P are CD162 and CD24. A primary function of CD62P is cell adhesion during neutrophil rolling, and plateletneutrophil and platelet-monocyte interactions.

**Function:** 

Ca2+-dependent receptor for myeloid cells that binds to carbohydrates on neutrophils and monocytes. Mediates the interaction of activated endothelial cells or platelets with leukocytes. The ligand recognized is sialyl-Lewis X. Mediates rapid rolling of leukocyte rolling over vascular surfaces during the initial steps in inflammation through interaction with SELPLG.

Subcellular Location :

Cell membrane ; Single-pass type I membrane protein .

**Expression:** Stored in the alpha-granules of platelets and Weibel-Palade bodies of

endothelial cells. Upon cell activation by agonists, P-selectin is transported rapidly

to the cell surface.

Tag: recombinant

**Sort :** 9999

No4:

Speciality: Nanobody
