

GPI Monoclonal Antibody

Catalog No: YM0312

Reactivity: Human

Applications: WB;IHC;IF;ELISA

Target: GPI

Fields: >>Glycolysis / Gluconeogenesis;>>Pentose phosphate pathway;>>Starch and

sucrose metabolism;>>Amino sugar and nucleotide sugar

metabolism;>>Metabolic pathways;>>Carbon metabolism;>>Biosynthesis of

nucleotide sugars

Gene Name: GPI

Protein Name: Glucose-6-phosphate isomerase

P06744

P06745

Human Gene Id: 2821

Human Swiss Prot

···

No:

Mouse Swiss Prot

No:

Immunogen: Purified recombinant fragment of human GPI expressed in E. Coli.

Specificity: GPI Monoclonal Antibody detects endogenous levels of GPI protein.

Formulation : Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Monoclonal, Mouse

Dilution: WB 1:500 - 1:2000. IHC 1:200 - 1:1000. IF 1:200 - 1:1000. ELISA: 1:10000. Not

yet tested in other applications.

Purification : Affinity purification

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

1/3

Molecularweight: 63kD

Cell Pathway:

Glycolysis / Gluconeogenesis;Pentose phosphate pathway;Starch and sucrose metabolism;Amino sugar and nucleotide sugar metabolism;

Background:

This gene encodes a member of the glucose phosphate isomerase protein family. The encoded protein has been identified as a moonlighting protein based on its ability to perform mechanistically distinct functions. In the cytoplasm, the gene product functions as a glycolytic enzyme (glucose-6-phosphate isomerase) that interconverts glucose-6-phosphate and fructose-6-phosphate. Extracellularly, the encoded protein (also referred to as neuroleukin) functions as a neurotrophic factor that promotes survival of skeletal motor neurons and sensory neurons, and as a lymphokine that induces immunoglobulin secretion. The encoded protein is also referred to as autocrine motility factor based on an additional function as a tumor-secreted cytokine and angiogenic factor. Defects in this gene are the cause of nonspherocytic hemolytic anemia and a severe enzyme deficiency can be associated with hydrops fetalis

Function:

 $catalytic\ activity: D-glucose\ 6-phosphate = D-fructose$

6-phosphate.,disease:Defects in GPI are a cause of hereditary nonspherocytic hemolytic anemia (HA) [MIM:172400]. Severe GPI deficiency can be associated with hydrops fetalis, immediate neonatal death and neurological impairment.,function:Besides it's role as a glycolytic enzyme, mammalian GPI can function as a tumor-secreted cytokine and an angiogenic factor (AMF) that stimulates endothelial cell motility. GPI is also a neurotrophic factor (Neuroleukin) for spinal and sensory neurons.,online information:Phosphoglucose isomerase entry,online information:The Singapore human mutation and polymorphism database,pathway:Carbohydrate degradation; glycolysis; D-glyceraldehyde

3-phosphate and glycerone phosphate from D-glucose: step

2/4.,PTM:Phosphorylation at Ser-185 by CK2 has been shown to decrease

enzymatic activity and may contribute to s
