

Bcl-6-FC recombinant protein

Catalog No: YD3035

Reactivity: Human;

Purity: >90% as determined by SDS-PAGE

Gene Name: BCL6

Protein Name: B-cell lymphoma 6 protein (BCL-6) (B-cell lymphoma 5 protein) (BCL-5) (Protein

LAZ-3) (Zinc finger and BTB domain-containing protein 27) (Zinc finger protein

51)

Human Gene Id: 604

Human Swiss Prot

No:

P41182

Formulation : Phosphate-buffered solution

Source: Mammalian cells

Storage Stability: -15°C to -25°C/1 year(Avoid freeze / thaw cycles)

Function: Transcriptional repressor mainly required for germinal center (GC) formation and

the lineage and biological functions. Forms complexes with different corepressors and histone deacetylases to repress the transcriptional expression of different subsets of target genes. Represses its target genes by binding directly to the DNA sequence 5'-TTCCTAGAA-3' (BCL6-binding site) or indirectly by repressing the transcriptional activity of transcription factors. In GC B-cells, represses genes that function in differentiation, inflammation, apoptosis and cell cycle control, also autoregulates its transcriptional expression and up-regulates, indirectly, the

antibody affinity maturation which has different mechanisms of action specific to

expression of some genes important for GC reactions, such as AICDA, through the repression of microRNAs expression, like miR155. An important function is to

allow GC B

Subcellular Location:

Nucleus.

Expression: Expressed in germinal center T- and B-cells and in primary immature dendritic

cells.
