

## AASS Polyclonal Antibody

<b>Catalog No :</b>	YT0041
<b>Reactivity :</b>	Human;Rat;Mouse;
<b>Applications :</b>	WB;ELISA
<b>Target :</b>	AASS
<b>Fields :</b>	>>Lysine degradation;>>Metabolic pathways
<b>Gene Name :</b>	AASS
<b>Protein Name :</b>	Alpha-aminoadipic semialdehyde synthase mitochondrial
<b>Human Gene Id :</b>	10157
<b>Human Swiss Prot No :</b>	Q9UDR5
<b>Mouse Swiss Prot No :</b>	Q99K67
<b>Immunogen :</b>	The antiserum was produced against synthesized peptide derived from human AASS. AA range:251-300
<b>Specificity :</b>	AASS Polyclonal Antibody detects endogenous levels of AASS protein.
<b>Formulation :</b>	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
<b>Source :</b>	Polyclonal, Rabbit,IgG
<b>Dilution :</b>	WB 1:500 - 1:2000. ELISA: 1:10000. Not yet tested in other applications.
<b>Purification :</b>	The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.
<b>Concentration :</b>	1 mg/ml
<b>Storage Stability :</b>	-15°C to -25°C/1 year(Do not lower than -25°C)

<b>Observed Band :</b>	102kD
<b>Cell Pathway :</b>	Lysine biosynthesis;Lysine degradation;
<b>Background :</b>	This gene encodes a bifunctional enzyme that catalyzes the first two steps in the mammalian lysine degradation pathway. The N-terminal and the C-terminal portions of this enzyme contain lysine-ketoglutarate reductase and saccharopine dehydrogenase activity, respectively, resulting in the conversion of lysine to alpha-aminoadipic semialdehyde. Mutations in this gene are associated with familial hyperlysinemia. [provided by RefSeq, Jul 2008],
<b>Function :</b>	<p>catalytic activity:N(6)-(L-1,3-dicarboxypropyl)-L-lysine + NAD(+) + H(2)O = L-glutamate + 2-aminoadipate 6-semialdehyde + NADH.,catalytic activity:N(6)-(L-1,3-dicarboxypropyl)-L-lysine + NADP(+) + H(2)O = L-lysine + 2-oxoglutarate + NADPH.,disease:Defects in AASS are the cause of hyperlysinemia [MIM:238700]. Hyperlysinemia is an autosomal recessive condition characterized by hyperlysinemia lysinuria and variable saccharopinuria.,function:Bifunctional enzyme that catalyzes the first two steps in lysine degradation. The N-terminal and the C-terminal contain lysine-ketoglutarate reductase and saccharopine dehydrogenase activity, respectively.,induction:Induced by starvation.,pathway:Amino-acid degradation; L-lysine degradation via saccharopine pathway; glutaryl-CoA from L-lysine: step 1/6.,pathway:Amino-acid degradation; L-lysine degradation via saccharopine pathway; glutaryl-CoA from L-lys</p>
<b>Subcellular Location :</b>	Mitochondrion .
<b>Expression :</b>	Expressed in all 16 tissues examined with highest expression in the liver.
<b>Sort :</b>	1564
<b>No4 :</b>	1
<b>Host :</b>	Rabbit
<b>Modifications :</b>	Unmodified
