

AR-β1 Polyclonal Antibody

YT0359 Catalog No:

Reactivity: Human; Mouse; Rat

Applications: WB;IHC;IF;ELISA

Target: AR-β1

Fields: >>Calcium signaling pathway;>>cGMP-PKG signaling pathway;>>cAMP

> signaling pathway;>>Neuroactive ligand-receptor interaction;>>Adrenergic signaling in cardiomyocytes;>>Gap junction;>>Regulation of lipolysis in

adipocytes;>>Renin secretion;>>Salivary secretion;>>Chemical carcinogenesis -

receptor activation;>>Dilated cardiomyopathy

Gene Name: ADRB1

Protein Name: Beta-1 adrenergic receptor

P08588

Human Gene Id: 153

Human Swiss Prot

No:

Mouse Gene Id: 11554

Mouse Swiss Prot

P34971

No:

Rat Gene Id: 24925

Rat Swiss Prot No: P18090

The antiserum was produced against synthesized peptide derived from human Immunogen:

ADRB1. AA range:281-330

Specificity: AR-\(\beta\)1 Polyclonal Antibody detects endogenous levels of AR-\(\beta\)1 protein.

Formulation: Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

Dilution: WB 1:500 - 1:2000, IHC 1:100 - 1:300, IF 1:200 - 1:1000, ELISA: 1:20000, Not

yet tested in other applications.

Purification: The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

Concentration: 1 mg/ml

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Observed Band: 51kD

Cell Pathway: Calcium; Neuroactive ligand-receptor interaction; Endocytosis; Gap

junction; Dilated cardiomyopathy;

Background: The adrenergic receptors (subtypes alpha 1, alpha 2, beta 1, and beta 2) are a

prototypic family of guanine nucleotide binding regulatory protein-coupled receptors that mediate the physiological effects of the hormone epinephrine and the neurotransmitter norepinephrine. Specific polymorphisms in this gene have been shown to affect the resting heart rate and can be involved in heart failure.

[provided by RefSeq, Jul 2008],

Function: domain: The PDZ domain-binding motif mediates competitive interactions with

GOPC, MAGI3 and DLG4 and plays a role in subcellular location of the

receptor.,function:Beta-adrenergic receptors mediate the catecholamine-induced activation of adenylate cyclase through the action of G proteins. This receptor

binds epinephrine and norepinephrine with approximately equal

affinity.,PTM:Homologous desensitization of the receptor is mediated by its phosphorylation by beta-adrenergic receptor kinase.,similarity:Belongs to the G-protein coupled receptor 1 family.,subcellular location:Localized at the plasma membrane. Found in the Golgi upon GOPC overexpression.,subunit:Interacts with

GOPC, MAGI3 and DLG4.,

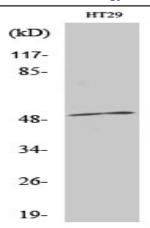

Subcellular Location:

Cell membrane; Multi-pass membrane protein. Early endosome. Colocalizes with RAPGEF2 at the plasma membrane (By similarity). Localized at the plasma

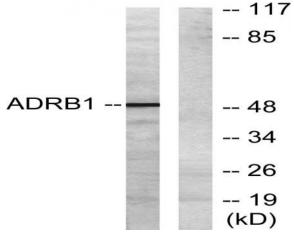

membrane. Found in the Golgi upon GOPC overexpression. .

Expression: Placenta,
