

## Bcl-x Polyclonal Antibody

<b>Catalog No :</b>	YT0477
<b>Reactivity :</b>	Human;Mouse;Rat
<b>Applications :</b>	WB;IHC;IF;ELISA
<b>Target :</b>	Bcl-x
<b>Fields :</b>	>>EGFR tyrosine kinase inhibitor resistance;>>Platinum drug resistance;>>Ras signaling pathway;>>NF-kappa B signaling pathway;>>p53 signaling pathway;>>Mitophagy - animal;>>Autophagy - animal;>>PI3K-Akt signaling pathway;>>Apoptosis;>>Apoptosis - multiple species;>>NOD-like receptor signaling pathway;>>JAK-STAT signaling pathway;>>Parkinson disease;>>Amyotrophic lateral sclerosis;>>Pathways of neurodegeneration - multiple diseases;>>Shigellosis;>>Toxoplasmosis;>>Measles;>>Human T-cell leukemia virus 1 infection;>>Herpes simplex virus 1 infection;>>Human immunodeficiency virus 1 infection;>>Pathways in cancer;>>Transcriptional misregulation in cancer;>>Pancreatic cancer;>>Chronic myeloid leukemia;>>Small cell lung cancer;>>Hepatocellular carcinoma;>>Lipid and atherosclerosis
<b>Gene Name :</b>	BCL2L1
<b>Protein Name :</b>	Bcl-2-like protein 1
<b>Human Gene Id :</b>	598
<b>Human Swiss Prot No :</b>	Q07817
<b>Mouse Gene Id :</b>	12048
<b>Mouse Swiss Prot No :</b>	Q64373
<b>Rat Gene Id :</b>	24888
<b>Rat Swiss Prot No :</b>	P53563
<b>Immunogen :</b>	The antiserum was produced against synthesized peptide derived from human BCL-XL. AA range:13-62

<b>Specificity :</b>	<u>Bcl-x Polyclonal Antibody detects endogenous levels of Bcl-x protein.</u>
<b>Formulation :</b>	<u>Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.</u>
<b>Source :</b>	<u>Polyclonal, Rabbit,IgG</u>
<b>Dilution :</b>	<u>WB 1:500 - 1:2000. IHC 1:100 - 1:300. IF 1:200 - 1:1000. ELISA: 1:5000. Not yet tested in other applications.</u>
<b>Purification :</b>	<u>The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.</u>
<b>Concentration :</b>	<u>1 mg/ml</u>
<b>Storage Stability :</b>	<u>-15°C to -25°C/1 year(Do not lower than -25°C)</u>
<b>Observed Band :</b>	<u>30kD</u>
<b>Cell Pathway :</b>	<u>Apoptosis_Inhibition;Apoptosis_Mitochondrial;Apoptosis_Overview;Jak_STAT; Amyotrophic lateral sclerosis (ALS);Pathways in cancer;Pancreatic cancer;Chronic myeloid leukemia;Small cell lung cancer;</u>
<b>Background :</b>	<u>The protein encoded by this gene belongs to the BCL-2 protein family. BCL-2 family members form hetero- or homodimers and act as anti- or pro-apoptotic regulators that are involved in a wide variety of cellular activities. The proteins encoded by this gene are located at the outer mitochondrial membrane, and have been shown to regulate outer mitochondrial membrane channel (VDAC) opening. VDAC regulates mitochondrial membrane potential, and thus controls the production of reactive oxygen species and release of cytochrome C by mitochondria, both of which are the potent inducers of cell apoptosis. Alternative splicing results in multiple transcript variants encoding two different isoforms. The longer isoform acts as an apoptotic inhibitor and the shorter isoform acts as an apoptotic activator. [provided by RefSeq, Dec 2015],</u>
<b>Function :</b>	<u>domain:The BH4 motif is required for anti-apoptotic activity. The BH1 and BH2 motifs are required for both heterodimerization with other Bcl-2 family members and for repression of cell death.,function:Potent inhibitor of cell death. Isoform Bcl-X(L) anti-apoptotic activity is inhibited by association with SIVA isoform 1. Inhibits activation of caspases (By similarity). Appears to regulate cell death by blocking the voltage-dependent anion channel (VDAC) by binding to it and preventing the release of the caspase activator, cytochrome c, from the mitochondrial membrane. The Bcl-X(S) isoform promotes apoptosis.,PTM:Proteolytically cleaved by caspases during apoptosis. The cleaved protein, lacking the BH4 motif, has pro-apoptotic activity.,similarity:Belongs to the Bcl-2 family.,subcellular location:Mitochondrial membranes and perinuclear envelope.,subunit:Bcl-X(L) forms homodimers, and het</u>

**Subcellular Location :**

[Isoform Bcl-X(L)]: Mitochondrion inner membrane . Mitochondrion outer membrane . Mitochondrion matrix . Cytoplasmic vesicle, secretory vesicle, synaptic vesicle membrane . Cytoplasm, cytosol . Cytoplasm, cytoskeleton, microtubule organizing center, centrosome. Nucleus membrane ; Single-pass membrane protein ; Cytoplasmic side . After neuronal stimulation, translocates from cytosol to synaptic vesicle and mitochondrion membrane in a calmodulin-dependent manner (By similarity). Localizes to the centrosome when phosphorylated at Ser-49. .

**Expression :**

Bcl-X(S) is expressed at high levels in cells that undergo a high rate of turnover, such as developing lymphocytes. In contrast, Bcl-X(L) is found in tissues containing long-lived postmitotic cells, such as adult brain.
