

## **CYP27A1 Polyclonal Antibody**

Catalog No: YT1202

**Reactivity:** Human;Rat;Mouse;

**Applications:** WB;IHC;IF;ELISA

Target: CYP27A1

**Fields:** >>Primary bile acid biosynthesis;>>Metabolic pathways;>>PPAR signaling

pathway;>>Cholesterol metabolism

Gene Name: CYP27A1

**Protein Name:** Sterol 26-hydroxylase mitochondrial

Q02318

Q9DBG1

Human Gene Id: 1593

**Human Swiss Prot** 

No:

**Mouse Swiss Prot** 

No:

**Immunogen:** The antiserum was produced against synthesized peptide derived from human

Cytochrome P450 27A1. AA range:101-150

**Specificity:** CYP27A1 Polyclonal Antibody detects endogenous levels of CYP27A1 protein.

**Formulation :** Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

**Dilution:** WB 1:500 - 1:2000. IHC 1:100 - 1:300. IF 1:200 - 1:1000. ELISA: 1:10000. Not

yet tested in other applications.

**Purification:** The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

**Concentration**: 1 mg/ml

1/3

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Observed Band: 60kD

**Cell Pathway:** Primary bile acid biosynthesis;PPAR;

**Background:** cytochrome P450 family 27 subfamily A member 1(CYP27A1) Homo sapiens

This gene encodes a member of the cytochrome P450 superfamily of enzymes. The cytochrome P450 proteins are monooxygenases which catalyze many reactions involved in drug metabolism and synthesis of cholesterol, steroids and other lipids. This mitochondrial protein oxidizes cholesterol intermediates as part of the bile synthesis pathway. Since the conversion of cholesterol to bile acids is the major route for removing cholesterol from the body, this protein is important

for overall cholesterol homeostasis. Mutations in this gene cause

cerebrotendinous xanthomatosis, a rare autosomal recessive lipid storage

disease. [provided by RefSeq, Jul 2008],

**Function:** catalytic activity:5-beta-cholestane-3-alpha,7-alpha,12-alpha-triol + NADPH +

O(2) = (25R)-5-beta-cholestane-3-alpha,7-alpha,12-alpha,26-tetraol + NADP(+) + H(2)O.,cofactor:Heme group.,disease:Defects in CYP27A1 are the cause of cerebrotendinous xanthomatosis (CTX) [MIM:213700]. CTX is a rare sterol storage disorder characterized clinically by progressive neurologic dysfunction, premature atherosclerosis, and cataracts.,function:Catalyzes the first step in the oxidation of the side chain of sterol intermediates; the 27-hydroxylation of 5-beta-cholestane-3-alpha,7-alpha,12-alpha-triol. Has also a vitamin D3-25-hydroxylase

activity.,pathway:Hormone biosynthesis; cholecalciferol

biosynthesis., similarity: Belongs to the cytochrome P450 family.,

Subcellular Location : Mitochondrion inner membrane; Peripheral membrane protein. Post-translationally targeted to mitochondria. All three of the receptor proteins in the TOM complex, TOMM70, TOMM20 and TOMM22 are required for the

translocation across the mitochondrial outer membrane. After translocation into the matrix, associates with the inner membrane as a membrane extrinsic protein.

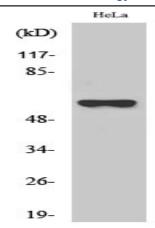

**Expression:** 

Expressed in the neural retina and underlying retinal pigment epithelium (at

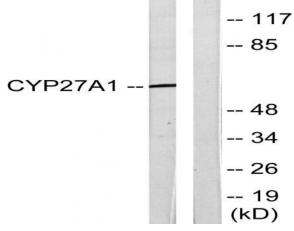

protein level) (PubMed:21411718). Expressed in the gray and white matter of

cerebellum (at protein level) (PubMed:28190002).
