

DGK-θ Polyclonal Antibody

Catalog No: YT1337

Reactivity: Human; Rat; Mouse;

Applications: WB;IHC;IF;ELISA

Target: DGK-θ

Fields: >>Glycerolipid metabolism;>>Glycerophospholipid metabolism;>>Metabolic

pathways;>>Phosphatidylinositol signaling system;>>Phospholipase D signaling

pathway;>>Choline metabolism in cancer

Gene Name: DGKQ

Protein Name: Diacylglycerol kinase theta

P52824

Q6P5E8

Human Gene Id: 1609

Human Swiss Prot

No:

Mouse Swiss Prot

No:

Immunogen: The antiserum was produced against synthesized peptide derived from human

DGKQ. AA range:691-740

Specificity: DGK-θ Polyclonal Antibody detects endogenous levels of DGK-θ protein.

Formulation : Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

Dilution: WB 1:500 - 1:2000. IHC 1:100 - 1:300. ELISA: 1:10000.. IF 1:50-200

Purification: The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

Concentration: 1 mg/ml

1/3

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Observed Band: 101kD

Cell Pathway: Glycerolipid metabolism;Glycerophospholipid metabolism;Phosphatidylinositol

signaling system;

Background: The protein encoded by this gene contains three cysteine-rich domains, a proline-

rich region, and a pleckstrin homology domain with an overlapping Rasassociating domain. It is localized in the speckle domains of the nucleus, and mediates the regeneration of phosphatidylinositol (PI) from diacylglycerol in the PI-

cycle during cell signal transduction. [provided by RefSeq, Jul 2008],

Function : catalytic activity:ATP + 1,2-diacylglycerol = ADP + 1,2-diacyl-sn-glycerol

3-phosphate., similarity: Belongs to the eukaryotic diacylglycerol kinase family., similarity: Contains 1 DAGKc domain., similarity: Contains 1 Ras-

associating domain., similarity: Contains 3 phorbol-ester/DAG-type zinc fingers.,

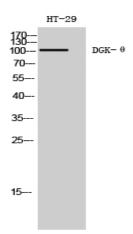

Subcellular Cytoplasm . Cytoplasm, cytosol . Cell membrane . Cell junction, synapse . Cytoplasm, cytoskeleton . Nucleus speckle . Nucleus matrix .

Translocates to the plasma membrane in response to steroid hormone receptor stimulation (PubMed:15632189). Translocation to the plasma membrane is dependent on G-protein coupled receptor stimulation and subsequent activation of PRKCE and probably PRKCH (PubMed:15632189). Translocates to the nucleus in response to thrombin stimulation (Probable). Association with the

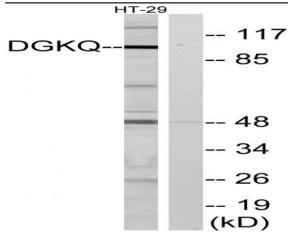

nuclear matrix is regulated by nerve growth factor (By similarity). .

Expression: Brain,
