## Observed Band: 40kD

Cell Pathway: $\quad$ Neuroactive ligand-receptor interaction;

Background: The neuropeptide galanin modulates a variety of physiologic processes including cognition/memory, sensory/pain processing, hormone secretion, and feeding behavior. The human galanin receptors are G protein-coupled receptors that functionally couple to their intracellular effector through distinct signaling pathways. GALR3 is found in many tissues and may be expressed as 1.4-, 2.4-, and 5-kb transcripts [provided by RefSeq, Jul 2008],

Function : function:Receptor for the hormone galanin.,similarity:Belongs to the G-protein coupled receptor 1 family.,

Subcellular Cell membrane; Multi-pass membrane protein.
Location:
Expression :
Uterus,
