Background :	The protein encoded by this gene is a calcyclin binding protein. It may be
Background.	involved in calcium-dependent ubiquitination and subsequent proteosomal
	degradation of target proteins. It probably serves as a molecular bridge in
	ubiquitin E3 complexes and participates in the ubiquitin-mediated degradation of
	beta-catenin. Two alternatively spliced transcript variants encoding different
	isoforms have been found for this gene. [provided by RefSeq, Jul 2008],
