

C32 Polyclonal Antibody

Catalog No: YT5730

Reactivity: Human; Rat; Mouse;

Applications: WB;ELISA

Target: C32

Gene Name: CKLF

Protein Name: Chemokine-like factor

Q9UBR5

Q9DAS1

Human Gene Id: 51192

Human Swiss Prot

No:

Mouse Gene ld: 75458

Mouse Swiss Prot

No:

Rat Gene Id: 245978

Rat Swiss Prot No: Q9JK79

Immunogen: Synthesized peptide derived from Chemokine-like factor at AA range: 103-152

Specificity: C32 Polyclonal Antibody detects endogenous levels of C32 protein.

Formulation : Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

Dilution: WB 1:500 - 1:2000. ELISA: 1:10000. Not yet tested in other applications.

Purification: The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

1/3

Concentration: 1 mg/ml

-15°C to -25°C/1 year(Do not lower than -25°C) Storage Stability:

Observed Band: 20kD

Background: The product of this gene is a cytokine. Cytokines are small proteins that have an

> essential role in the immune and inflammatory responses. This gene is one of several chemokine-like factor genes located in a cluster on chromosome 16. The protein encoded by this gene is a potent chemoattractant for neutrophils. monocytes and lymphocytes. It also can stimulate the proliferation of skeletal muscle cells. This protein may play important roles in inflammation and in the regeneration of skeletal muscle. Alternatively spliced transcript variants encoding different isoforms have been identified. Naturally occurring read-through

transcription occurs between this locus and the neighboring locus CMTM1 (CKLFlike MARVEL transmembrane domain containing 1).[provided by RefSeq, Feb

2011],

Function: function: Isoform CKLF1 has chemotactic response in rat monocytes.

neutrophils, and lymphocytes., function: May play an important role in inflammation

and regeneration of skeletal muscle. Partly inhibited by interleukin

10., similarity: Belongs to the chemokine-like factor family., similarity: Contains 1 MARVEL domain., tissue specificity: All 4 isoforms have highest expression levels

in adult spleen, lungs, testis, ovary, peripheral blood leucocyte, placenta,

pancreas, and in fetal brain, skeletal muscle, thymus and heart. Lower expression levels in adult skeletal muscle, liver, thymus colon, prostate, and fetal spleen and

liver...

Subcellular Location:

[Isoform 1]: Secreted .; [Isoform 2]: Membrane ; Multi-pass membrane protein .;

[Isoform 4]: Membrane; Multi-pass membrane protein.

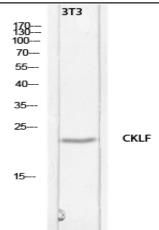

Expression:

Isoform 1, isoform 2, isoform 3 and isoform 4 have highest expression levels in adult spleen, lung, testis, ovary, peripheral blood leukocyte, placenta, pancreas, and in fetal brain, skeletal muscle, thymus and heart. Lower expression levels in

adult skeletal muscle, liver, thymus colon, prostate and fetal spleen and liver.
