**Background :** This gene encodes a member of the PAQR (progesterin and adipoQ receptor) family. Members of this family are evolutionarily conserved with significant sequence identity to bacterial hemolysin-like proteins and are defined by a set of seven transmembrane domains. The protein encoded by this gene localizes to the Golgi apparatus to modulate Ras signaling. Alternative splicing results in multiple transcript variants and protein isoforms. [provided by RefSeq, Jun 2012],

**Function :** similarity:Belongs to the ADIPOR family.,

**Subcellular Location :** Golgi apparatus membrane ; Multi-pass membrane protein .

**Expression :** Shows restricted expression with highest levels in brain and testis.
