

EphA4 rabbit pAb

YT7781 **Catalog No:**

Human; Mouse Reactivity:

Applications: WB;ELISA

Target: EphA4

Fields: >>Axon guidance

Gene Name: EPHA4 HEK8 SEK TYRO1

Protein Name: EphA4

Human Gene Id: 2043

Human Swiss Prot

P54764

No:

Mouse Gene Id: 13838

Mouse Swiss Prot

No:

Q03137

Synthesized peptide derived from human EphA4 AA range: 540-620 Immunogen:

This antibody detects endogenous levels of Human EphA4 **Specificity:**

Formulation: Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

Dilution: WB 1:1000-2000 ELISA 1:5000-20000

Purification: The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

Concentration: 1 mg/ml

1/2

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Molecularweight: 108kD

Background: This gene belongs to the ephrin receptor subfamily of the protein-tyrosine kinase

family. EPH and EPH-related receptors have been implicated in mediating developmental events, particularly in the nervous system. Receptors in the EPH subfamily typically have a single kinase domain and an extracellular region containing a Cys-rich domain and 2 fibronectin type III repeats. The ephrin receptors are divided into 2 groups based on the similarity of their extracellular domain sequences and their affinities for binding ephrin-A and ephrin-B ligands. Multiple transcript variants encoding different isoforms have been found for this

gene. [provided by RefSeq, Jan 2015],

Function : catalytic activity:ATP + a [protein]-L-tyrosine = ADP + a [protein]-L-tyrosine

phosphate.,domain:The protein kinase domain mediates interaction with

NGEF/ephexin-1., function: Receptor for members of the ephrin-A family. Binds to ephrin-A1, -A4 and -A5. Binds more poorly to ephrin-A2 and -A3. May play a role

in a signal transduction process involved in hindbrain pattern

formation., similarity: Belongs to the protein kinase superfamily. Tyr protein kinase family., similarity: Belongs to the protein kinase superfamily. Tyr protein kinase

family. Ephrin receptor subfamily., similarity: Contains 1 protein kinase

domain., similarity: Contains 1 SAM (sterile alpha motif)

domain.,similarity:Contains 2 fibronectin type-III domains.,subunit:Interacts with the src family kinase, p59-Fyn, through the major phosphorylation site at position

Tyr-602. Interacts with NGEF/ephexin-1., tissue specificity: Ubiquitous.

Subcellular Location:

Cell membrane; Single-pass type I membrane protein. Cell projection, axon. Cell projection, dendrite. Cell junction, synapse, postsynaptic density membrane. Early endosome. Cell junction, adherens junction. Clustered upon activation and

targeted to early endosome...

Expression: Ubiquitous.
