

Erbin rabbit pAb

Catalog No: YT7875

Reactivity: Human; Mouse

Applications: WB;ELISA

Target: Erbin

Fields: >>NOD-like receptor signaling pathway

Gene Name: ERBB2IP ERBIN KIAA1225 LAP2

Q96RT1

Q80TH2

Protein Name: Erbin Polyclonal Antibody

Human Gene ld: 55914

Human Swiss Prot

Idiliali Swiss Fiot

No:

Mouse Gene Id: 59079

Mouse Swiss Prot

No:

Rat Gene Id: 25359

Rat Swiss Prot No: Q62733

Immunogen: Synthesized peptide derived from human Erbin

Specificity: This antibody detects endogenous levels of Human Erbin Polyclonal Antibody

Formulation : Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

Dilution: WB 1:1000-2000 ELISA 1:5000-20000

Purification: The antibody was affinity-purified from rabbit antiserum by affinity-

1/2

chromatography using epitope-specific immunogen.

Concentration: 1 mg/ml

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Molecularweight: 155kD

Background : This gene is a member of the leucine-rich repeat and PDZ domain (LAP) family.

The encoded protein contains 17 leucine-rich repeats and one PDZ domain. It binds to the unphosphorylated form of the ERBB2 protein and regulates ERBB2 function and localization. It has also been shown to affect the Ras signaling pathway by disrupting Ras-Raf interaction. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene. [provided

by RefSeq, Nov 2011],

Function: function: Acts as an adapter for the receptor ERBB2, in epithelia. By binding the

unphosphorylated 'Tyr-1248' of receptor ERBB2, it may contribute to stabilize this unphosphorylated state., sequence caution: Contaminating sequence. Potential poly-A sequence., similarity: Belongs to the LAP (LRR and PDZ) protein family., similarity: Contains 1 PDZ (DHR) domain., similarity: Contains 17 LRR (leucine-rich) repeats., subcellular location: Found in hemidesmosomes, which are cell-substrate adhesion complexes in stratified epithelia. In transfected cells, either diffusely distributed over the cytoplasm or concentrated at the basolateral membrane., subunit: Interacts with ERBB2, BPAG1 and ITGB4. May favor the localization of ERBB2, by restricting its presence to the basolateral membrane of

epithelial cells. Also found to interact with ARVCF and delta catenin.,tissue

specificity:Highly expressed in brain, hea

SubcellularCell junction, hemidesmosome. Nucleus membrane. Basolateral cell membrane **Location:**Found in hemidesmosomes, which are cell-substrate adhesion complexes in

. Found in hemidesmosomes, which are cell-substrate adhesion complexes in stratified epithelia. In transfected cells, either diffusely distributed over the cytoplasm or concentrated at the basolateral membrane. Colocalizes with the adrenergic receptors, ADREN1A and ADREN1B, at the nuclear membrane of

cardiac myocytes (By similarity). .

Expression: Highly expressed in brain, heart, kidney, muscle and stomach, followed by liver,

spleen and intestine.
