Immunogen: The antiserum was produced against synthesized peptide derived from human

BCL-2 around the phosphorylation site of Thr69. AA range:46-95

Specificity: Phospho-Bcl-2 (T69) Polyclonal Antibody detects endogenous levels of Bcl-2

protein only when phosphorylated at T69.

Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide. Formulation:

Source: Polyclonal, Rabbit, IgG

Dilution: IHC 1:100 - 1:300. IF 1:200 - 1:1000. ELISA: 1:20000. Not yet tested in other

applications.

The antibody was affinity-purified from rabbit antiserum by affinity-**Purification:**

chromatography using epitope-specific immunogen.

Background: BCL2, apoptosis regulator(BCL2) Homo sapiens This gene encodes an integral

outer mitochondrial membrane protein that blocks the apoptotic death of some cells such as lymphocytes. Constitutive expression of BCL2, such as in the case of translocation of BCL2 to Ig heavy chain locus, is thought to be the cause of follicular lymphoma. Alternative splicing results in multiple transcript variants.

Function: disease: A chromosomal aberration involving BCL2 may be a cause of follicular

> lymphoma (FL) [MIM:151430]; also known as type II chronic lymphatic leukemia. Translocation t(14;18)(g32;g21) with immunoglobulin gene regions. BCL2

> mutations found in non-Hodgkin lymphomas carrying the chromosomal translocation could be attributed to the Ig somatic hypermutation mechanism resulting in nucleotide transitions., domain: The BH4 motif is required for antiapoptotic activity and for interaction with RAF-1., function: Suppresses apoptosis in a variety of cell systems including factor-dependent lymphohematopoietic and neural cells. Regulates cell death by controlling the mitochondrial membrane

permeability. Appears to function in a feedback loop system with caspases. Inhibits caspase activity either by preventing the release of cytochrome c from the

mitochondria and/or by binding to the apoptosis-activati
