Background : The protein encoded by this intronless gene is a member of the JUN family, and a functional component of the AP1 transcription factor complex. This protein has been proposed to protect cells from p53-dependent senescence and apoptosis. Alternative translation initiation site usage results in the production of different isoforms (PMID:12105216). [provided by RefSeq, Nov 2013],

Function : function: Binds an AP-1 site and upon cotransfection stimulates the activity of a promoter that bears an AP-1 site., similarity: Belongs to the bZIP family. Jun subfamily., similarity: Contains 1 bZIP domain., subunit: Binds DNA as a dimer.,

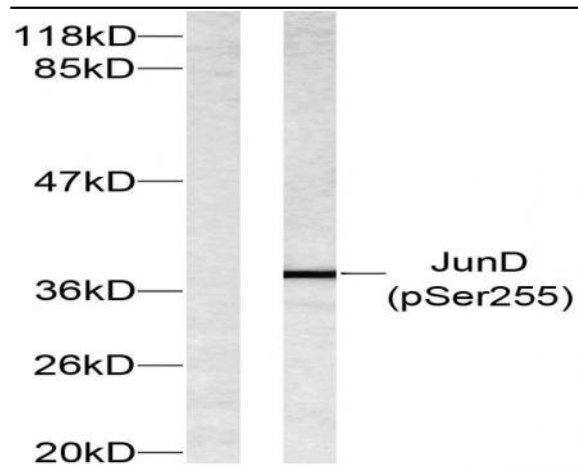

Subcellular Location : Nucleus.

Expression : Epithelium, Spleen,
