

MEK-1/2 (phospho Ser222/226) Polyclonal Antibody

Catalog No: YP0168

Reactivity: Human; Mouse; Rat

Applications: WB;IHC;IF;ELISA

Target: MEK-1/2

Fields: >>EGFR tyrosine kinase inhibitor resistance;>>Endocrine resistance;>>MAPK

signaling pathway;>>ErbB signaling pathway;>>Ras signaling pathway;>>Rap1

signaling pathway;>>cGMP-PKG signaling pathway;>>cAMP signaling pathway;>>Chemokine signaling pathway;>>HIF-1 signaling pathway;>>FoxO signaling pathway;>>Sphingolipid signaling pathway;>>Phospholipase D

 $signaling\ pathway; >> Oocyte\ meiosis; >> Autophagy\ -\ animal; >> mTOR\ signaling$

pathway;>>PI3K-Akt signaling pathway;>>Apoptosis;>>Cellular senescence;>>Vascular smooth muscle contraction;>>VEGF signaling pathway;>>Apelin signaling pathway;>>Osteoclast differentiation;>>Focal adhesion;>>Gap junction;>>Signaling pathways regulating pluripotency of stem cells;>>Neutrophil extracellular trap formation;>>Toll-like receptor signaling pathway;>>Natural killer cell mediated cytotoxicity;>>T cell receptor signaling

pathway;>>B cell receptor signaling pathway;>>Fc epsilon RI signaling pathway:>>Fc gamma R-mediated phagocytosis;>>TNF signaling

pathway;>>Lon

Gene Name: MAP2K1/MAP2K2

Protein Name: Dual specificity mitogen-activated protein kinase kinase 1/2

Human Gene Id: 5604/5605

Human Swiss Prot Q02750/P36507

No:

Mouse Gene ld: 26395/26396

Rat Gene Id: 170851/58960

Rat Swiss Prot No: Q01986/P36506

Immunogen: The antiserum was produced against synthesized peptide derived from human

MEK1/2 around the phosphorylation site of Ser221. AA range:193-242

Specificity: Phospho-MEK-1/2 (S222/226) Polyclonal Antibody detects endogenous levels

of MEK-1/2 protein only when phosphorylated at S222/226.

Formulation: Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

Dilution: WB 1:500 - 1:2000. IHC 1:100 - 1:300. ELISA: 1:20000.. IF 1:50-200

Purification: The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

Concentration: 1 mg/ml

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Observed Band: 44kD

Cell Pathway: Regulates Angiogenesis; Regulation of Actin Dynamics; Stem cell pathway;

T Cell Receptor; Cell Growth; Insulin Receptor; Toll Like;

MAPK ERK Growth; MAPK G Protein; ErbB/HER; B Cell Antigen; PI3K/Akt

Background : The protein encoded by this gene is a member of the dual specificity protein

kinase family, which acts as a mitogen-activated protein (MAP) kinase kinase. MAP kinases, also known as extracellular signal-regulated kinases (ERKs), act as an integration point for multiple biochemical signals. This protein kinase lies upstream of MAP kinases and stimulates the enzymatic activity of MAP kinases upon wide variety of extra- and intracellular signals. As an essential component of MAP kinase signal transduction pathway, this kinase is involved in many cellular processes such as proliferation, differentiation, transcription regulation and

development. [provided by RefSeq, Jul 2008],

Function: catalytic activity:ATP + a protein = ADP + a phosphoprotein.,disease:Defects in

MAP2K1 are a cause of cardiofaciocutaneous syndrome (CFC syndrome) [MIM:115150]; also known as cardio-facio-cutaneous syndrome. CFC syndrome is characterized by a distinctive facial appearance, heart defects and mental retardation. Heart defects include pulmonic stenosis, atrial septal defects and hypertrophic cardiomyopathy. Some affected individuals present with ectodermal abnormalities such as sparse, friable hair, hyperkeratotic skin lesions and a generalized ichthyosis-like condition. Typical facial features are similar to Noonan syndrome. They include high forehead with bitemporal constriction, hypoplastic supraorbital ridges, downslanting palpebral fissures, a depressed nasal bridge, and posteriorly angulated ears with prominent helices. The inheritance of CFC

syndrome is autosomal dominant., enzyme reg

Subcellular Cytoplasm, cytoskeleton, microtubule organizing center, centrosome.

2/3

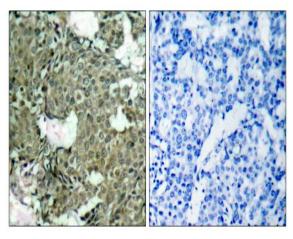

Location:

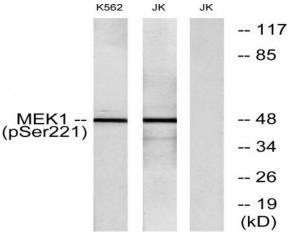

Cytoplasm, cytoskeleton, microtubule organizing center, spindle pole body . Cytoplasm . Nucleus . Membrane ; Peripheral membrane protein . Localizes at centrosomes during prometaphase, midzone during anaphase and midbody during telophase/cytokinesis (PubMed:14737111). Membrane localization is probably regulated by its interaction with KSR1 (PubMed:10409742). .

Expression: Widely expressed, with extremely low levels in brain.
