

14-3-3σ (Phospho Ser186) rabbit pAb

Catalog No :	YP1614
Reactivity :	Human;Mouse
Applications :	WB;ELISA
Target :	14-3-3σ
Fields :	>>Cell cycle;>>p53 signaling pathway;>>Aldosterone-regulated sodium reabsorption
Gene Name :	SFN HME1
Protein Name :	14-3-3σ (Phospho Ser186)
Human Gene Id :	2810
Human Swiss Prot	P31947
NO : Mouse Gene Id :	55948
Mouse Swiss Prot	O70456
No : Immunogen :	Synthesized peptide derived from human 14-3-30 (Phospho Ser186)
Specificity :	This antibody detects endogenous levels of Human,Mouse 14-3-3σ (Phospho Ser186)
Formulation :	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
Source :	Polyclonal, Rabbit,IgG
Dilution :	WB 1:1000-2000 ELISA 1:5000-20000
Purification :	The antibody was affinity-purified from rabbit serum by affinity-chromatography using specific immunogen.
Concentration :	1 mg/ml

Best Tools for immunology Research -15°C to -25°C/1 year(Do not lower than -25°C) **Storage Stability : Observed Band :** 30kD function:Adapter protein implicated in the regulation of a large spectrum of both **Background:** general and specialized signaling pathway. Binds to a large number of partners, usually by recognition of a phosphoserine or phosphothreonine motif. Binding generally results in the modulation of the activity of the binding partner. When bound to KRT17, regulates protein synthesis and epithelial cell growth by stimulating Akt/mTOR pathway., function:p53-regulated inhibitor of G2/M progression., similarity: Belongs to the 14-3-3 family., subcellular location: May be secreted by a non-classical secretory pathway., subunit: Homodimer. Interacts with KRT17 (By similarity). Found in a complex with XPO7, EIF4A1, ARHGAP1, VPS26A, VPS29, VPS35 and SFN., tissue specificity: Present mainly in tissues enriched in stratified squamous keratinising epithelium., **Function:** function:Adapter protein implicated in the regulation of a large spectrum of both general and specialized signaling pathway. Binds to a large number of partners, usually by recognition of a phosphoserine or phosphothreonine motif. Binding generally results in the modulation of the activity of the binding partner. When bound to KRT17, regulates protein synthesis and epithelial cell growth by stimulating Akt/mTOR pathway.,function:p53-regulated inhibitor of G2/M progression., similarity: Belongs to the 14-3-3 family., subcellular location: May be secreted by a non-classical secretory pathway., subunit: Homodimer. Interacts with KRT17 (By similarity). Found in a complex with XPO7, EIF4A1, ARHGAP1, VPS26A, VPS29, VPS35 and SFN., tissue specificity: Present mainly in tissues enriched in stratified squamous keratinising epithelium., Subcellular Cytoplasm. Nucleus . Secreted. May be secreted by a non-classical secretory pathway. Location : **Expression**: Present mainly in tissues enriched in stratified squamous keratinizing epithelium.
