

EPH B1/3/4 (Phospho Tyr778/792/774) rabbit pAb

Catalog No: YP1726

Reactivity: Human; Mouse; Rat

Applications: WB

Target: EPHB1/3/4

Fields: >>Axon guidance

Gene Name: EPHB1 ELK EPHT2 HEK6 NET

P54762

Q8CBF3

Protein Name: EPH B1/3/4 (Phospho-Tyr778/792/774)

Human Gene Id: 2047

Human Swiss Prot

No:

Mouse Gene ld: 270190

Mouse Swiss Prot

No:

Rat Gene ld: 24338

Rat Swiss Prot No: P09759

Immunogen: Synthesized peptide derived from human EPH B1/3/4 (Phospho-

Tyr778/792/774)

Specificity: This antibody detects endogenous levels of EPH B1/3/4 (Phospho-

Tyr778/792/774) at Human, Mouse, Rat

Formulation : Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Polyclonal, Rabbit, IgG

Dilution: WB 1:500-2000

1/2

Purification: The antibody was affinity-purified from rabbit serum by affinity-chromatography

using specific immunogen.

Concentration: 1 mg/ml

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Molecularweight: 108kD

Background: Ephrin receptors and their ligands, the ephrins, mediate numerous

developmental processes, particularly in the nervous system. Based on their structures and sequence relationships, ephrins are divided into the ephrin-A

(EFNA) class, which are anchored to the membrane by a

glycosylphosphatidylinositol linkage, and the ephrin-B (EFNB) class, which are transmembrane proteins. The Eph family of receptors are divided into 2 groups based on the similarity of their extracellular domain sequences and their affinities for binding ephrin-A and ephrin-B ligands. Ephrin receptors make up the largest subgroup of the receptor tyrosine kinase (RTK) family. The protein encoded by this gene is a receptor for ephrin-B family members. [provided by RefSeq. Jul

20081.

Function : catalytic activity:ATP + a [protein]-L-tyrosine = ADP + a [protein]-L-tyrosine

phosphate., function: Receptor for members of the ephrin-B family. Binds to ephrin-

B1, -B2 and -B3. May be involved in cell-cell interactions in the nervous

system., similarity: Belongs to the protein kinase superfamily. Tyr protein kinase

family. Ephrin receptor subfamily., similarity: Contains 1 protein kinase

domain., similarity: Contains 1 SAM (sterile alpha motif)

domain.,similarity:Contains 2 fibronectin type-III domains.,subunit:The ligand-activated form interacts with GRB2, GRB10 and NCK through their respective SH2 domains. The GRB10 SH2 domain binds EPHB1 through Tyr-928, while GRB2 binds residues within the catalytic domain. Interacts with EPHB6. The NCK SH2 domain binds EPHB1 through Tyr-594. Interacts with PRKCABP.,tissue

specificity:Preferentially expressed in brain.,

Subcellular Location:

Cell membrane ; Single-pass type I membrane protein . Early endosome

membrane. Cell projection, dendrite.

Expression : Preferentially expressed in brain.
