

CD62P (PN0132) Nb-FC recombinant antibody

Catalog No: YA0430

Reactivity: Human

Applications: ELISA

Target: CD62P

Gene Name: SELP GMRP GRMP

Protein Name: P-selectin (CD62 antigen-like family member P) (Granule membrane protein

140) (GMP-140) (Leukocyte-endothelial cell adhesion molecule 3) (LECAM3)

(Platelet activation dependent granule-external membra

Human Gene Id: 6403

Human Swiss Prot

No:

Immunogen: Purified recombinant Human CD62P

P16109

Specificity: This recombinant monoclonal antibody can detects endogenous levels of

CD62P protein.

Formulation : Phosphate-buffered solution

Source: Camel, chimeric fusion of Nanobody (VHH) and mouse IgG1 Fc domain,

recombinantly produced from 293F cell

Dilution: ELISA 1:5000-100000

Purification: Recombinant Expression and Affinity purified

Concentration : Please check the information on the tube

Storage Stability: -15°C to -25°C/1 year(Avoid freeze / thaw cycles)

Background: CD62P is a 140 kD type I transmembrane glycoprotein also known as P-

selectin, platelet activation-dependent granule membrane protein (PADGEM),

and GMP-140. It is expressed on activated platelets, megakaryocytes, and endothelial cells. CD62P is primarily stored in secretory α -granules in platelets and Weibel-Palade bodies in endothelial cells, and is rapidly relocated to the plasma membrane upon activation. The ligands for CD62P are CD162 and CD24. A primary function of CD62P is cell adhesion during neutrophil rolling, and plateletneutrophil and platelet-monocyte interactions.

Function:

Ca2+-dependent receptor for myeloid cells that binds to carbohydrates on neutrophils and monocytes. Mediates the interaction of activated endothelial cells or platelets with leukocytes. The ligand recognized is sialyl-Lewis X. Mediates rapid rolling of leukocyte rolling over vascular surfaces during the initial steps in inflammation through interaction with SELPLG.

Subcellular Location:

Cell membrane; Single-pass type I membrane protein.

Expression:

Stored in the alpha-granules of platelets and Weibel-Palade bodies of endothelial cells. Upon cell activation by agonists, P-selectin is transported rapidly to the cell surface.
