Background: The protein encoded by This gene is a single-pass type I membrane protein and

member of the immunoglobulin superfamily of receptors. The encoded protein may be involved in the regulation of antigen presentation. A soluble form of This

protein can bind to dendritic cells and inhibit their maturation. Three transcript variants encoding different isoforms have been found for This gene. [provided by RefSeq, Oct 2011]

Function : May play a significant role in antigen presentation or the cellular interactions that

follow lymphocyte activation.,online information:CD83 antigen,similarity:Contains

1 Ig-like V-type (immunoglobulin-like) domain.,subunit:Monomer.,tissue specificity:Expressed by activated lymphocytes, Langerhans cells and

interdigitating reticulum cells.,

Subcellular Location :

Membrane; Single-pass type I membrane protein.

Expression: Expressed by activated lymphocytes, Langerhans cells and interdigitating

reticulum cells.
