

Cytokeratin 7 Monoclonal Antibody

Catalog No: YM1027

Reactivity: Human; Mouse; Rat; Bovine

Applications: WB;IF

Target: Cytokeratin 7

Gene Name: KRT7

Protein Name: Keratin type II cytoskeletal 7

P08729

Q9DCV7

Human Gene Id: 3855

Human Swiss Prot

No:

Mouse Gene Id: 110310

Mouse Swiss Prot

No:

Rat Gene Id: 300242

Rat Swiss Prot No: Q6IG12

Immunogen: Purified recombinant human Cytokeratin 7 (N-terminus) protein fragments

expressed in E.coli.

Specificity: Cytokeratin 7 Monoclonal Antibody detects endogenous levels of Cytokeratin 7

protein.

Formulation : Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Source: Monoclonal, Mouse

Dilution : WB 1:1000 - 1:2000. IF 1:100 - 1:500. Not yet tested in other applications.

Purification : Affinity purification

1/3

Concentration: 1 mg/ml

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

Molecularweight: 51kD

Background : keratin 7(KRT7) Homo sapiens The protein encoded by this gene is a member

of the keratin gene family. The type II cytokeratins consist of basic or neutral proteins which are arranged in pairs of heterotypic keratin chains coexpressed during differentiation of simple and stratified epithelial tissues. This type II cytokeratin is specifically expressed in the simple epithelia lining the cavities of the internal organs and in the gland ducts and blood vessels. The genes encoding the type II cytokeratins are clustered in a region of chromosome 12q12-q13. Alternative splicing may result in several transcript variants; however, not all

variants have been fully described. [provided by RefSeq, Jul 2008],

Function: function:Blocks interferon-dependent interphase and stimulates DNA synthesis

in cells. Involved in the translational regulation of the human papillomavirus type 16 E7 mRNA (HPV16 E7).,induction:Up-regulated by retinoic acid.,mass

spectrometry: PubMed:11840567,miscellaneous:There are two types of cytoskeletal and microfibrillar keratin: I (acidic; 40-55 kDa) and II (neutral to basic;

56-70 kDa).,PTM:Arg-20 is dimethylated, probably to asymmetric dimethylarginine.,similarity:Belongs to the intermediate filament

family., subunit: Heterotetramer of two type I and two type II keratins. Interacts with eukaryotic translation initiator factor 3 (eIF3) subunit EIF3S10 and with HPV16 E7., tissue specificity: Expressed in cultured epidermal, bronchial and mesothelial cells but absent in colon, ectocervix and liver. Observed throughout the glandular

cells in the junction between stomach and esophagus bu

Subcellular Location:

Cytoplasm.

Expression:

Expressed in cultured epidermal, bronchial and mesothelial cells but absent in colon, ectocervix and liver. Observed throughout the glandular cells in the junction between stomach and esophagus but is absent in the esophagus.
