

CD22-FC recombinant protein

Catalog No: YD3076

Reactivity: Human;

Purity: >90% as determined by SDS-PAGE

Gene Name: CD22

Protein Name: B-cell receptor CD22 (B-lymphocyte cell adhesion molecule) (BL-CAM) (Sialic

acid-binding Ig-like lectin 2) (Siglec-2) (T-cell surface antigen Leu-14) (CD

antigen CD22)

Sequence : Amino acid:20-687,with FC tag.

P20273

Human Gene Id: 933

Human Swiss Prot

No:

Formulation : Phosphate-buffered solution

Source: Mammalian cells

Storage Stability: -15°C to -25°C/1 year(Avoid freeze / thaw cycles)

Function: Mediates B-cell B-cell interactions. May be involved in the localization of B-cells

in lymphoid tissues. Binds sialylated glycoproteins; one of which is CD45.

Preferentially binds to alpha-2,6-linked sialic acid. The sialic acid recognition site can be masked by cis interactions with sialic acids on the same cell surface. Upon ligand induced tyrosine phosphorylation in the immune response seems to be involved in regulation of B-cell antigen receptor signaling. Plays a role in positive regulation through interaction with Src family tyrosine kinases and may also act as an inhibitory receptor by recruiting cytoplasmic phosphatases via their SH2 domains that block signal transduction through dephosphorylation of signaling

molecules.

Subcellular Location:

Cell membrane; Single-pass type I membrane protein.

Expression: B-lymphocytes.
