

CD86 rabbit-FC recombinant protein

Catalog No: YD3115

Reactivity: Human;

Purity: >90% as determined by SDS-PAGE

Gene Name: CD86

Protein Name: CD86

Sequence: Amino acid:27-247, with rabbit FC tag.

Human Gene Id: 942

Human Swiss Prot

No:

Formulation: Phosphate-buffered solution

P42081

Source: Mammalian cells

Storage Stability: -15°C to -25°C/1 year(Avoid freeze / thaw cycles)

Background : This gene encodes a type I membrane protein that is a member of the

immunoglobulin superfamily. This protein is expressed by antigen-presenting cells, and it is the ligand for two proteins at the cell surface of T cells, CD28 antigen and cytotoxic T-lymphocyte-associated protein 4. Binding of this protein with CD28 antigen is a costimulatory signal for activation of the T-cell. Binding of this protein with cytotoxic T-lymphocyte-associated protein 4 negatively regulates T-cell activation and diminishes the immune response. Alternative splicing results in several transcript variants encoding different isoforms.[provided by RefSeq,

May 2011],

Function: function:Receptor involved in the costimulatory signal essential for T-lymphocyte

proliferation and interleukin-2 production, by binding CD28 or CTLA-4. May play a critical role in the early events of T-cell activation and costimulation of naive T-cells, such as deciding between immunity and anergy that is made by T-cells within 24 hours after activation. Isoform 2 interferes with the formation of CD86

clusters, and thus acts as a negative regulator of T-cell activation., online

information:CD86 entry,PTM:Polyubiquitinated; which is promoted by MARCH8 and results in endocytosis and lysosomal degradation.,similarity:Contains 1 Ig-like

1/2

C2-type (immunoglobulin-like) domain.,similarity:Contains 1 Ig-like V-type (immunoglobulin-like) domain.,subunit:Interacts with MARCH8. Interacts with human herpesvirus 8 MIR2 protein (Probable). Interacts with adenovirus subgroup B fiber proteins and acts as

Subcellular Location :

Membranous
