Background :	Phosducin-like protein is a putative modulator of heterotrimeric G proteins. The protein shares extensive amino acid sequence homology with phosducin, a phosphoprotein expressed in retina and pineal gland. Both phosducin-like protein and phosphoducin have been shown to regulate G-protein signaling by binding to the beta-gamma subunits of G proteins. [provided by RefSeq, Jul 2008],
Function :	similarity:Belongs to the phosducin family.,subunit:Forms a complex with the beta and gamma subunits of the GTP-binding protein, transducin.,
Subcellular Location :	Cell projection, cilium .
