Background : Predicted to enable sucrose:proton symporter activity. Predicted to be involved in positive regulation of small molecule metabolic process; regulation of oligodendrocyte differentiation; and sucrose transport. Predicted to be located in plasma membrane. Predicted to be active in membrane. [provided by Alliance of Genome Resources, Apr 2022]

Function : Proton-associated sucrose transporter. May be able to transport also glucose and fructose.

Subcellular Location : Membranous

Expression : Prostate specific. Expressed in all prostatic glandular cells. Expressed both in normal and cancerous prostates.
