

Cdc2 (PTR1334) mouse mAb

Catalog No: YM4748

Reactivity: Human; Mouse; Rat; Monkey;

Applications: WB;IF;ELISA

Target: CDK1/CDC2

Fields: >>Cell cycle;>>Oocyte meiosis;>>p53 signaling pathway;>>Cellular

senescence;>>Gap junction;>>Progesterone-mediated oocyte

maturation;>>Human immunodeficiency virus 1 infection;>>Viral carcinogenesis

Gene Name: CDK1

Protein Name: Cell division protein kinase 1

P06493

P11440

Human Gene Id: 983

Human Swiss Prot

No:

Mouse Swiss Prot

No:

Rat Swiss Prot No: P39951

Immunogen: Synthesized peptide derived from human CDC2 expressed in E. Coli. AA

range:1-100

Specificity: This antibody detects endogenous levels of Cdc2.

Formulation: PBS, 50% glycerol, 0.05% Proclin 300, 0.05%BSA

Source: Mouse, Monoclonal/IgG

Dilution: WB 1:500-2000. IF 1:100-500. ELISA 1:1000-5000

Purification: Protein G

Storage Stability: -15°C to -25°C/1 year(Do not lower than -25°C)

1/3

Molecularweight: 34kD

Observed Band: 34kD

Cell Pathway : Cell_Cycle_G1S;Cell_Cycle_G2M_DNA;Oocyte meiosis;p53;Gap

junction; Progesterone-mediated oocyte maturation;

Background: cyclin dependent kinase 1(CDK1) Homo sapiens The protein encoded by this

gene is a member of the Ser/Thr protein kinase family. This protein is a catalytic subunit of the highly conserved protein kinase complex known as M-phase promoting factor (MPF), which is essential for G1/S and G2/M phase transitions of eukaryotic cell cycle. Mitotic cyclins stably associate with this protein and function as regulatory subunits. The kinase activity of this protein is controlled by cyclin accumulation and destruction through the cell cycle. The phosphorylation and dephosphorylation of this protein also play important regulatory roles in cell cycle control. Alternatively spliced transcript variants encoding different isoforms

have been found for this gene. [provided by RefSeg, Mar 2009],

Function: catalytic activity:ATP + [DNA-directed RNA polymerase] = ADP + [DNA-directed

RNA polymerase] phosphate.,catalytic activity:ATP + a protein = ADP + a phosphoprotein.,enzyme regulation:Phosphorylation at Thr-14 or Tyr-15 inactivates the enzyme, while phosphorylation at Thr-161 activates

it.,function:Plays a key role in the control of the eukaryotic cell cycle. It is required in higher cells for entry into S-phase and mitosis. p34 is a component of the kinase complex that phosphorylates the repetitive C-terminus of RNA polymerase II.,similarity:Belongs to the protein kinase superfamily.,similarity:Belongs to the

protein kinase superfamily. CMGC Ser/Thr protein kinase family. CDC2/CDKX subfamily., similarity: Contains 1 protein kinase domain., subunit: Forms a stable but non-covalent complex with a regulatory subunit and with a cyclin. Interacts with

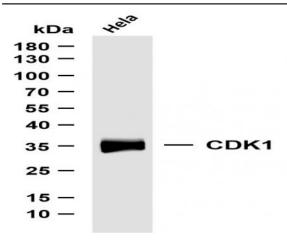

DLGAP5. Isoform 2 is unable to complex with c

Subcellular Location:

Cytoplasmic, Nuclear

Expression: Isoform 2 is found in breast cancer tissues.

Whole cell lysates were separated by 10% SDS-PAGE, and the membrane was blotted with anti-CDK1 (PTR1334) antibody. The HRP-conjugated Goat anti-Mouse IgG(H + L) antibody was used to detect the antibody. Lane 1: Hela
